

Elastic Execution Grid (E2G)

Reference Link - https://docs.tricentis.com/tosca-cloud/en-us/content/admin_guide/elastic_execution_grid.htm
https://docs.tricentis.com/tosca-cloud/en-us/content/admin_guide/elastic_execution_grid_integration.htm

Elastic Execution Grid (E2G) allows us to run Tosca on-prem tests on Tosca cloud. It is a part of Tosca Cloud which allows unattended test runs in parallel across multiple agents. In simple words E2G distributes the test cases (Execution Lists) across all available agents at the same time, leading to faster test execution cycles as test cases run simultaneously instead of one after another.

Key benefits of E2G:

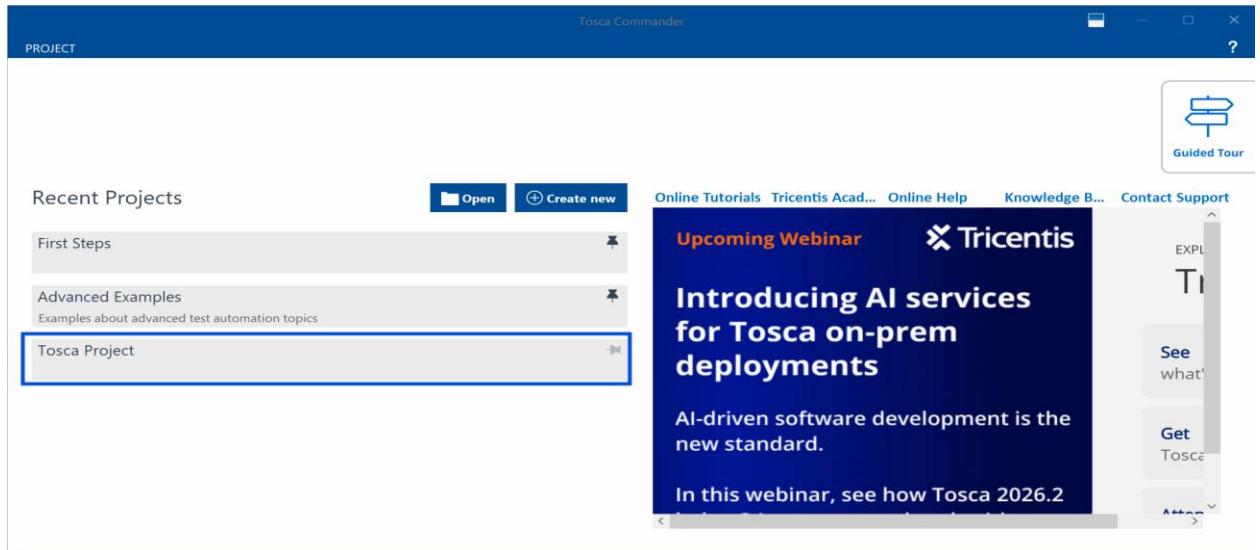

- The cloud agents run public web and API tests with no infrastructure dependency on your side.
- Tosca Cloud automatically updates the agents, which relieves you from manually installing the updates yourself.
- Parallel execution on multiple agents reduces regression cycles and makes a perfect fit into CI/CD pipeline.
- Cloud agents or team agents do not require creation of a configuration file aligning with DEX Agent machine characteristics thereby leading to lower maintenance.

Step by step process to connect Tosca Commander (On-Prem) with Tosca Cloud (E2G Set Up)

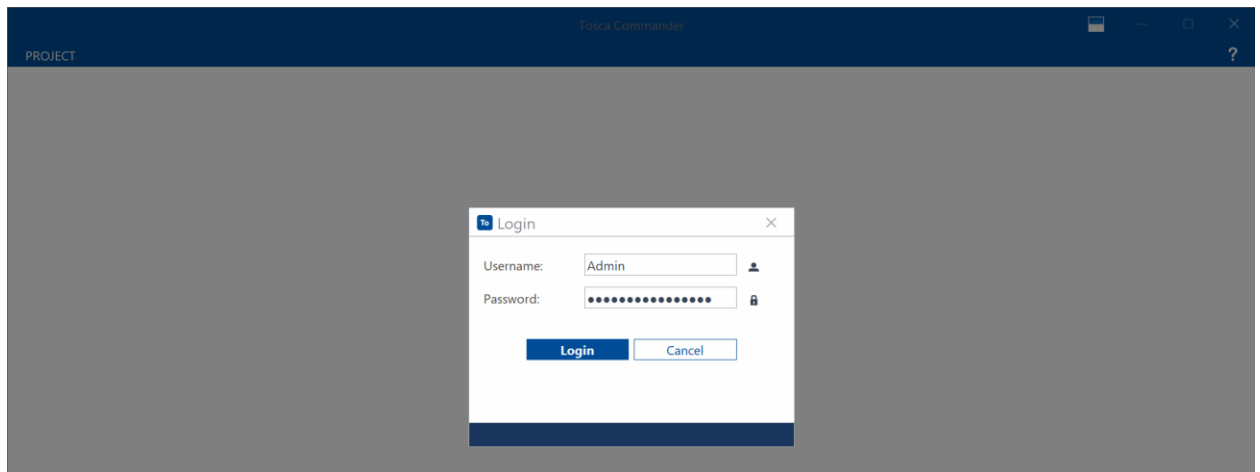

Pre-requisites:

- ❖ A Tosca Cloud Tenant account with an execution license to create and use team agents and/or cloud agents.
- ❖ A Tosca On-Prem workspace with an on-premise license managed via Tricentis Tosca Server.

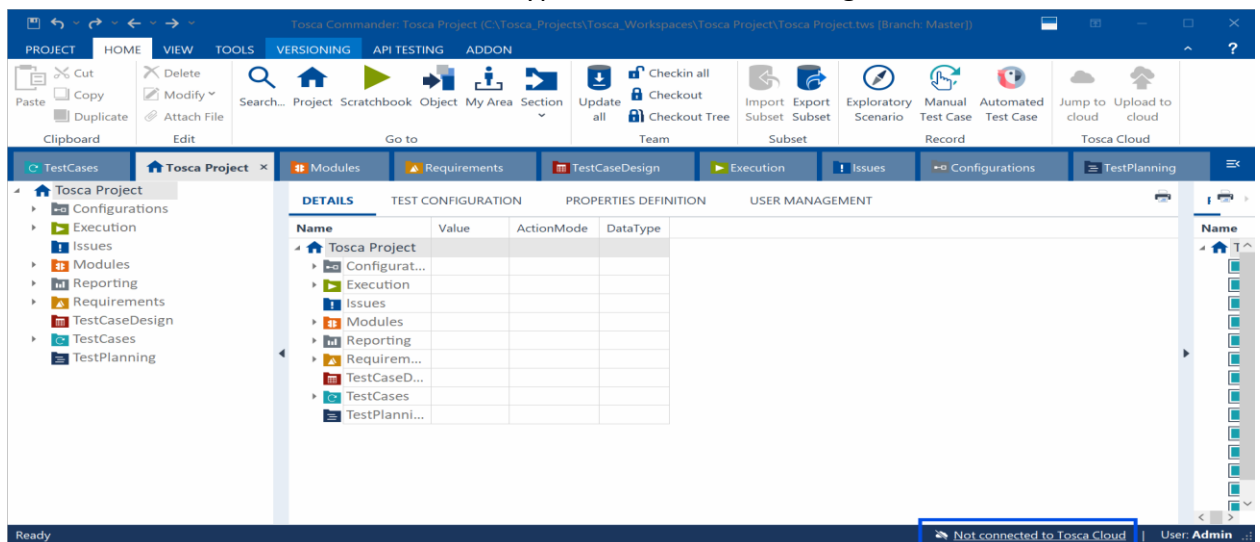

1. Open Tosca Commander and Open your Tosca Work Space

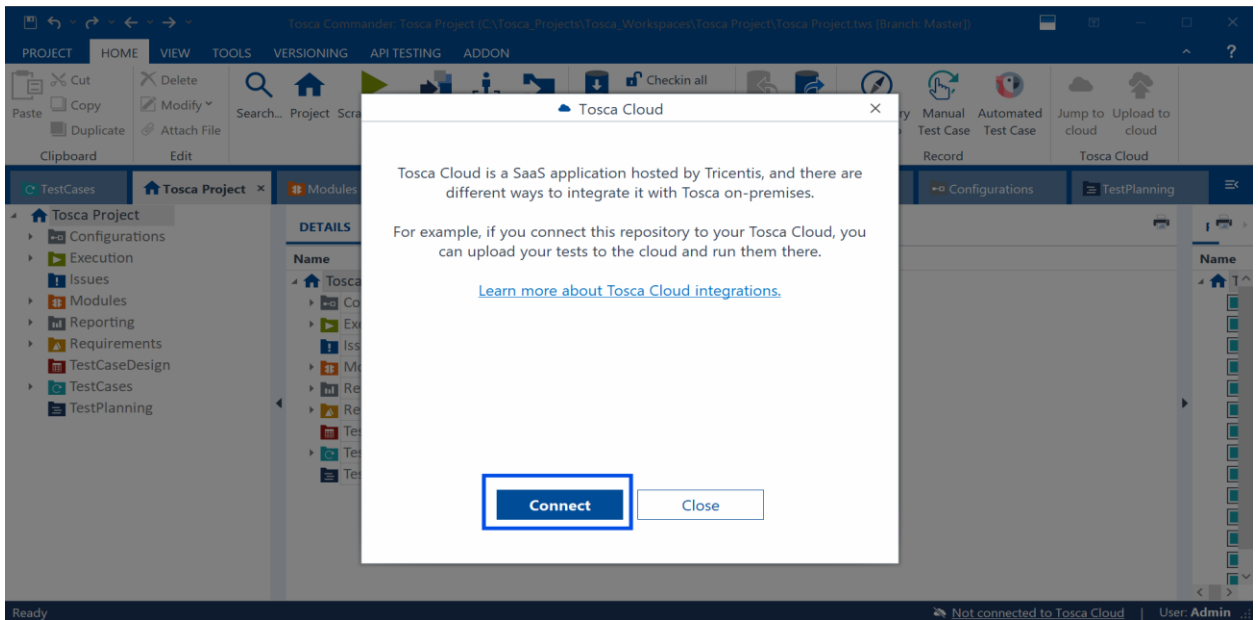

2. Enter User Name and credentials and login

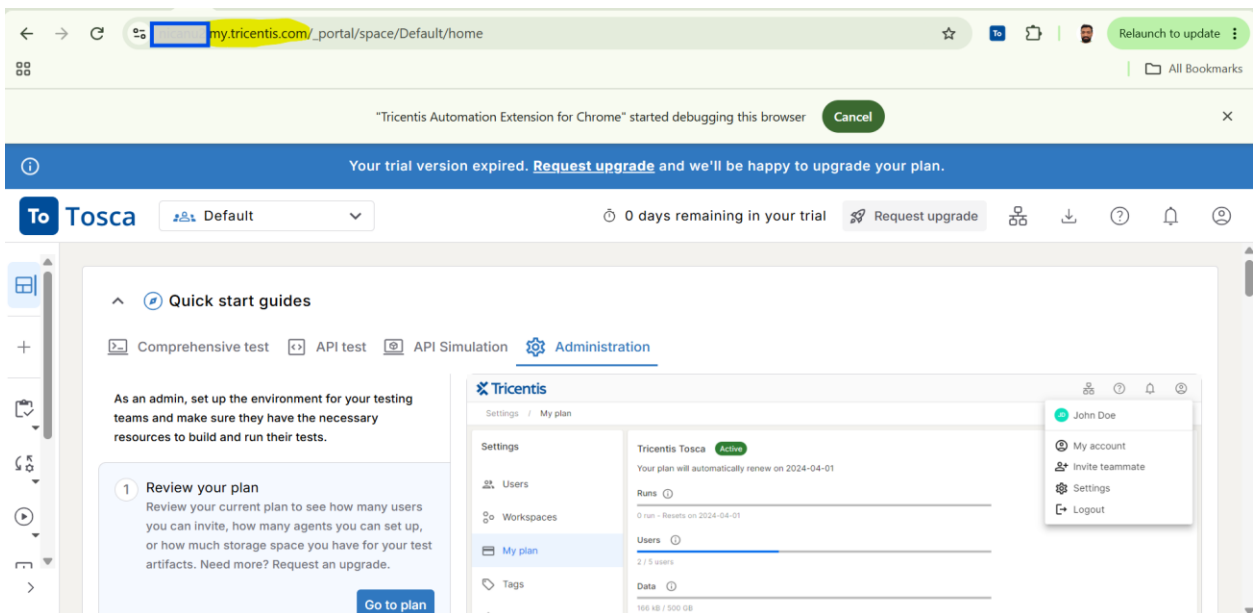

3. Click on Not connected to Tosca Cloud hyperlink at the bottom right

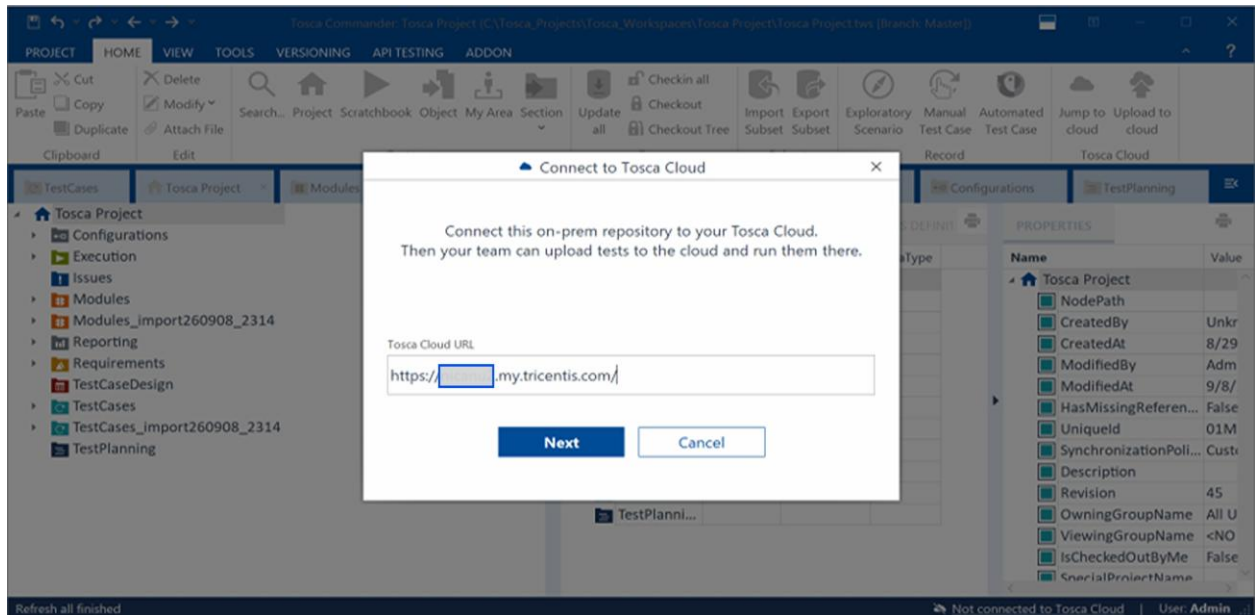

4. Click on Connect in the Tosca Cloud Pop-Window

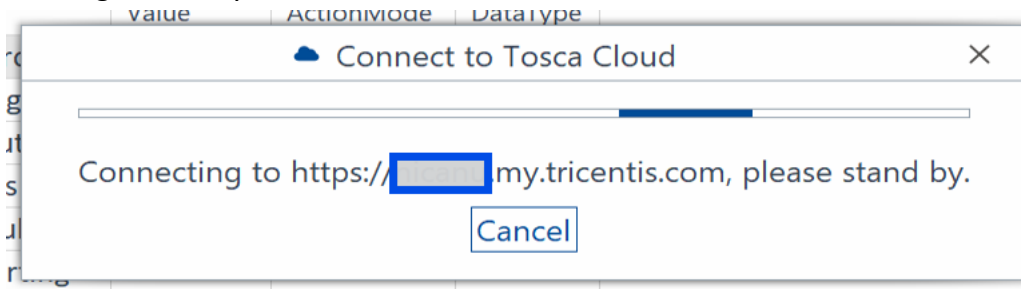

5. Copy the Tosca cloud Tenant URL from your Tosca Cloud home page shown below

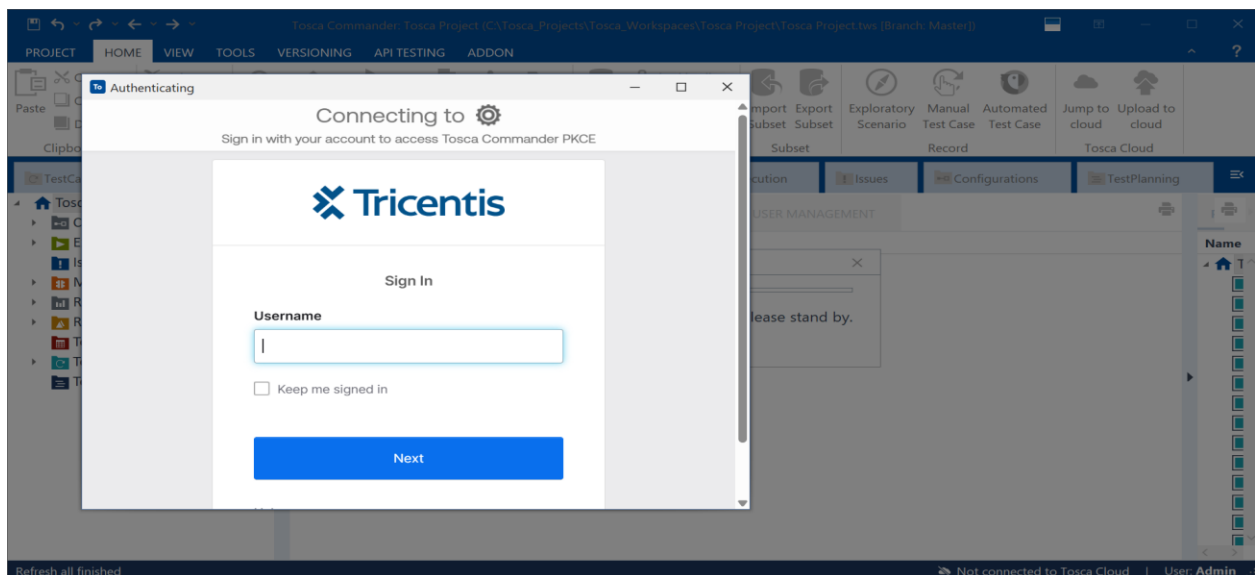

In **Connect to Tosca Cloud** pop-up window and click on **Next**

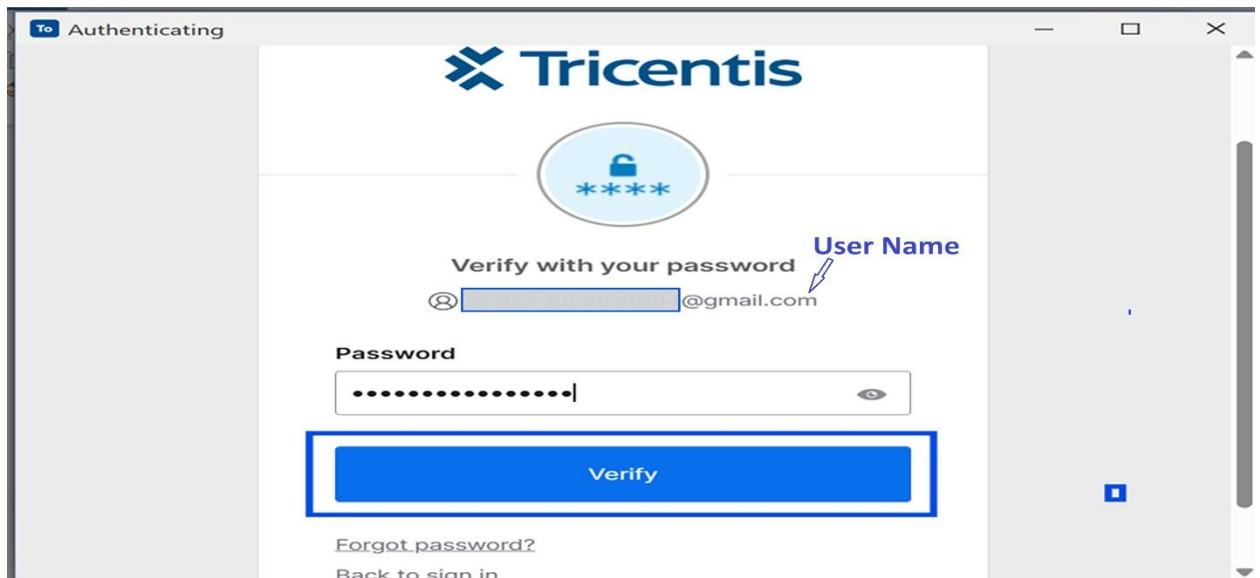

The engine will try to connect to Tosca Cloud Tenant Account

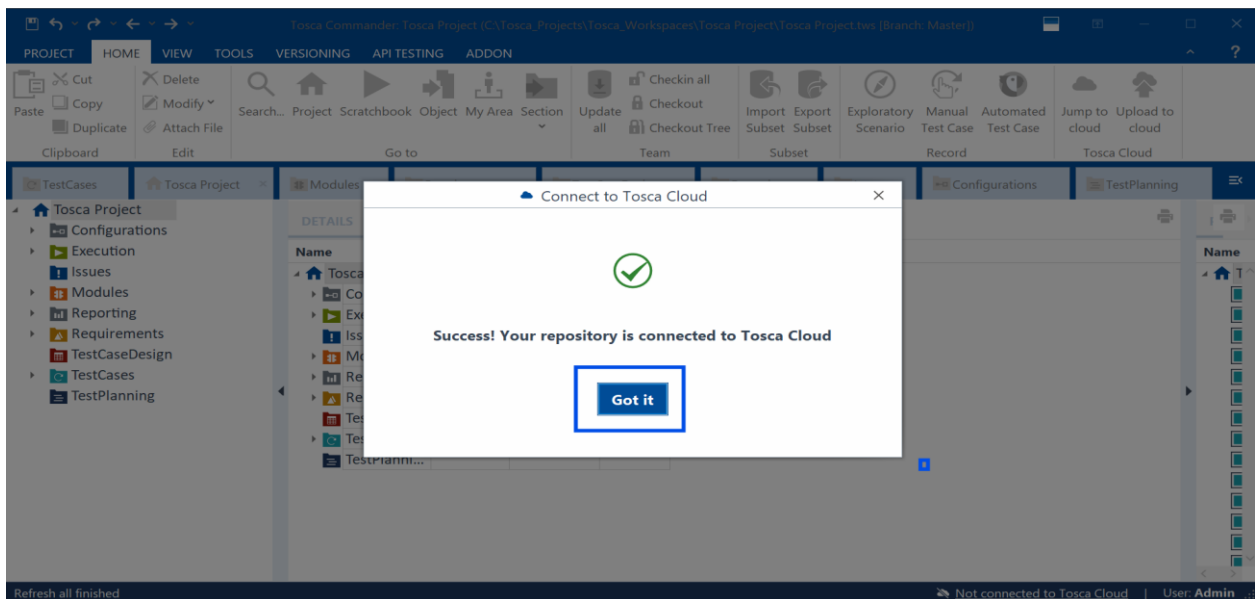

6. In the subsequent login screen window enter your Cloud tenant user name and password and click on **Verify** in the window to login and set up the connection

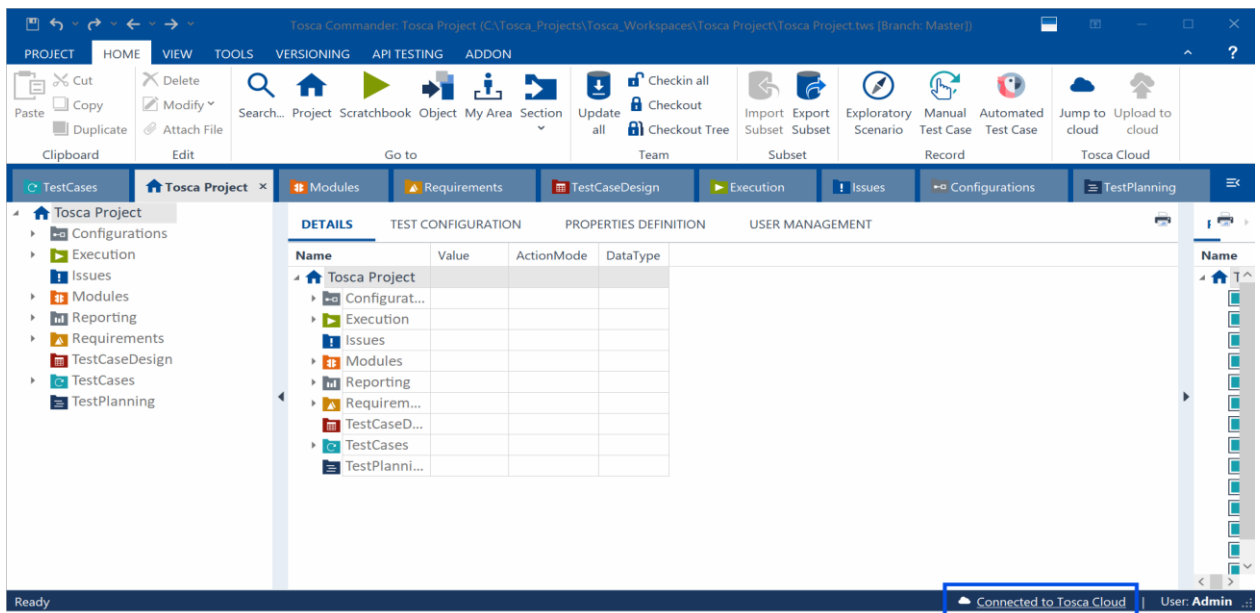

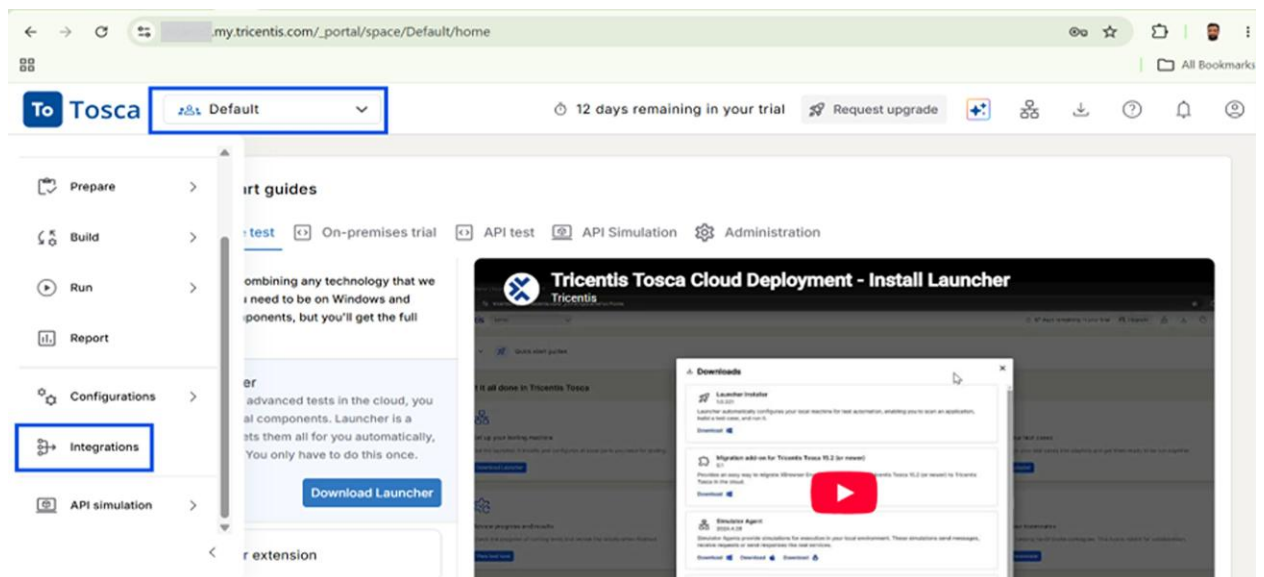

We will get the prompt that the Repository is connected to Tosca Cloud. Click on Got it to close the window

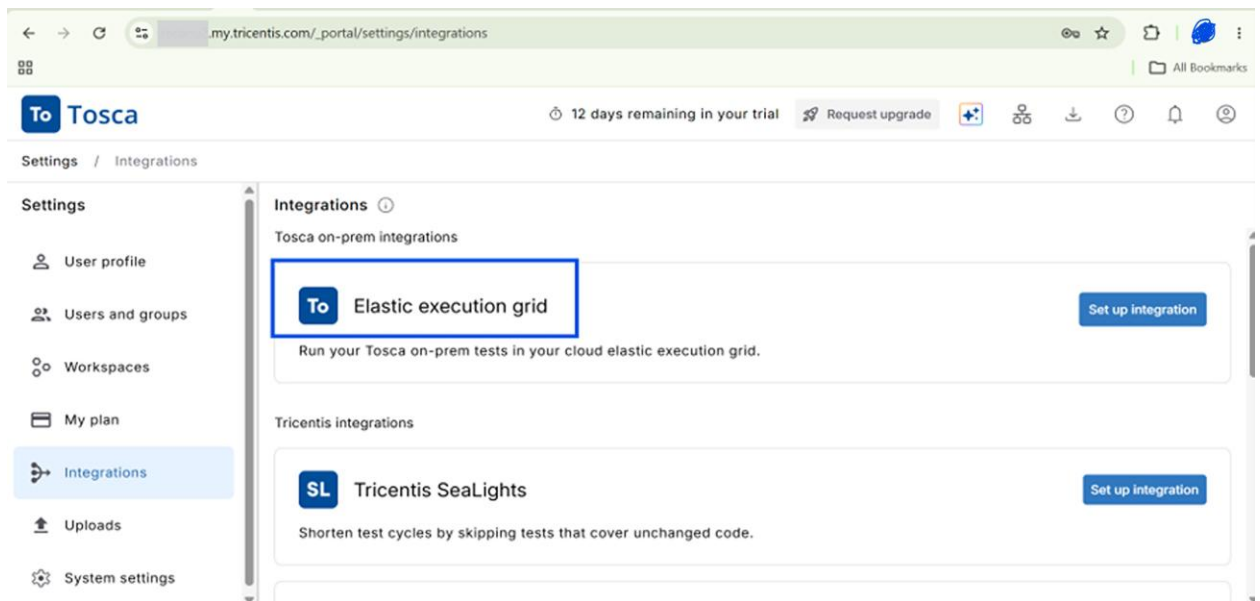

Now Tosca Commander is connected to Tosca Cloud

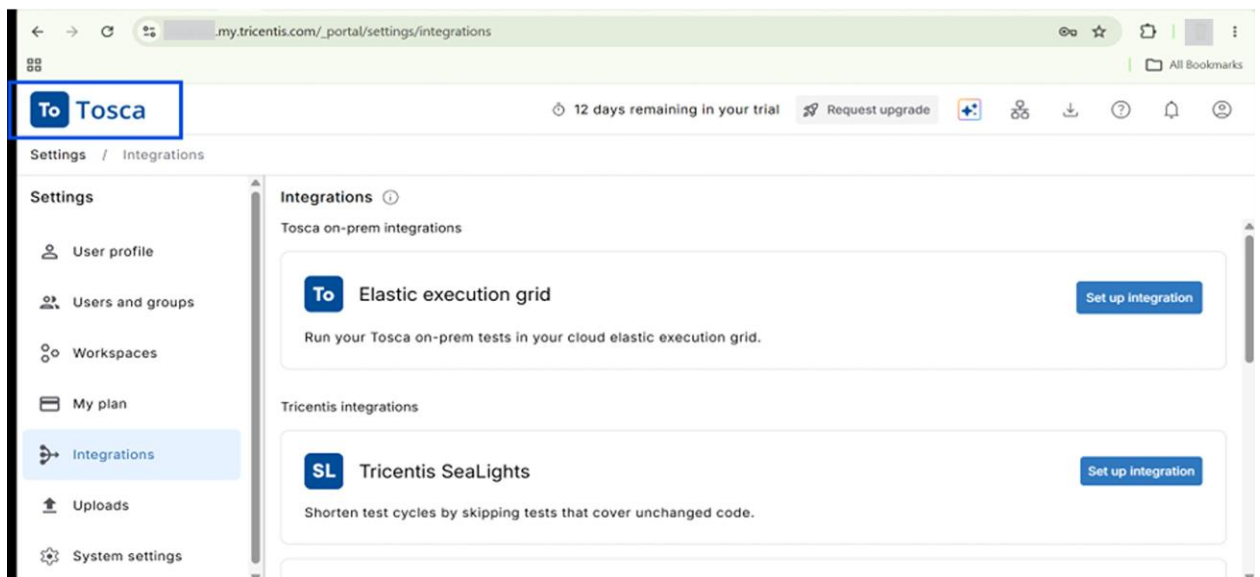

7. In Tosca Cloud Tenant URL, select your workspace and then select Integrations in left panel

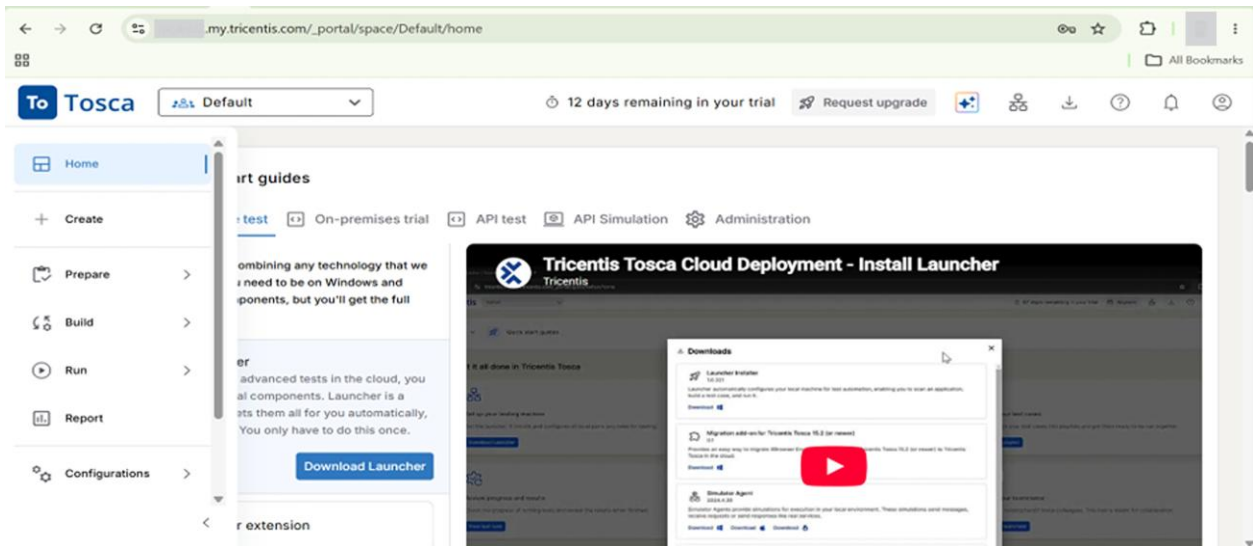

Elastic Execution Grid (E2G) section is displayed. It is a cloud-based execution engine designed to distribute and scale automated tests across virtual machines, local data centers, and the cloud. It helps you to run your Tosca-on-prem tests in your cloud elastic execution grid.

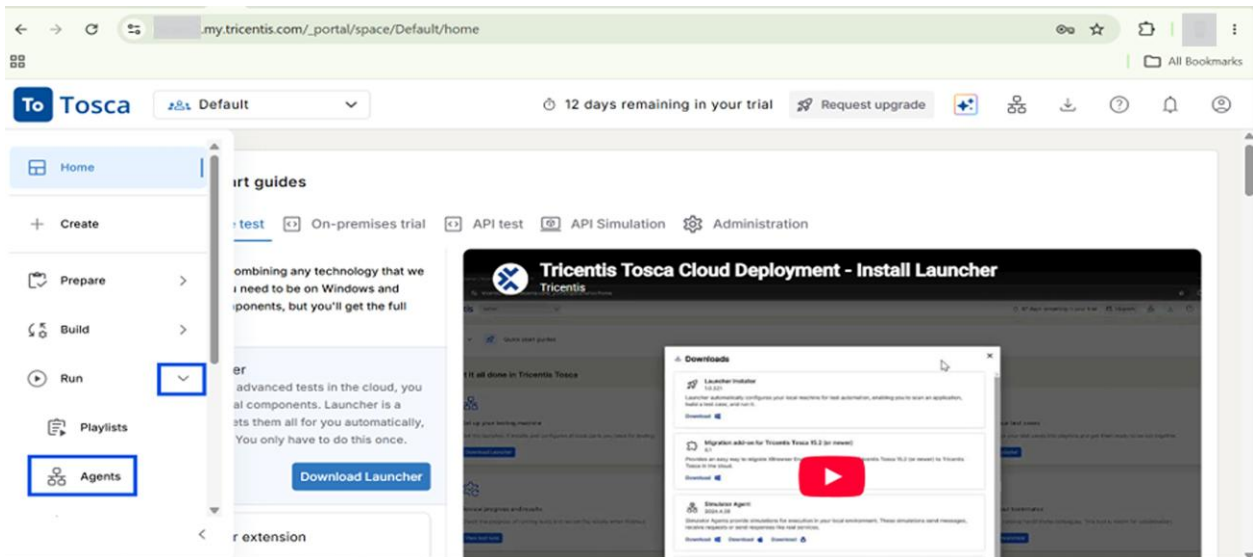

8. Before setting up the E2G integration, click on the Tosca hologram on top left to navigate to your particular workspace

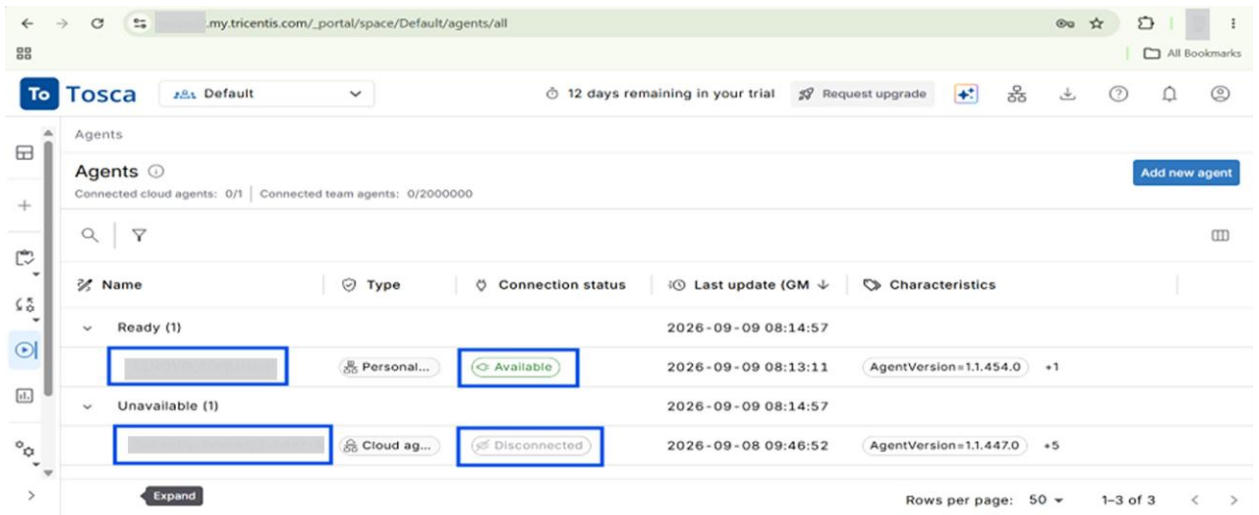

9. Click on the expand window for Run and select Agents

Available and Unavailable agents are displayed

10. Click on the Personal Agent hyperlink to view agent characteristics.

The screenshot shows the 'Agents' page in the Tosca interface. The URL is `my.tricentis.com/_portal/space/Default/agents/all`. The page displays a table of agents with columns: Name, Type, Connection status, Last update (GM), and Characteristics. The first row is expanded, showing a 'Ready (1)' agent. The 'Personal...' link is highlighted with a blue box. The 'Available' status is also highlighted with a green box. The 'Characteristics' column shows 'AgentVersion=1.1.454.0 +1'.

Name	Type	Connection status	Last update (GM)	Characteristics
Ready (1)			2026-09-09 08:18:27	
	Personal...	Available	2026-09-09 08:13:11	AgentVersion=1.1.454.0 +1
Unavailable (1)			2026-09-09 08:18:29	

Agent characteristics displayed

The screenshot shows the 'Agent details' page for 'LENOVO_SONU-lalat'. The URL is `my.tricentis.com/_portal/space/Default/agents/all/LENOVO_SONU-lalat`. The page displays the agent's characteristics, including 'AgentVersion' (1.1.454.0) and 'AgentIdentifier'. The 'LiveView' section shows a message: 'LiveView is not available for this agent'.

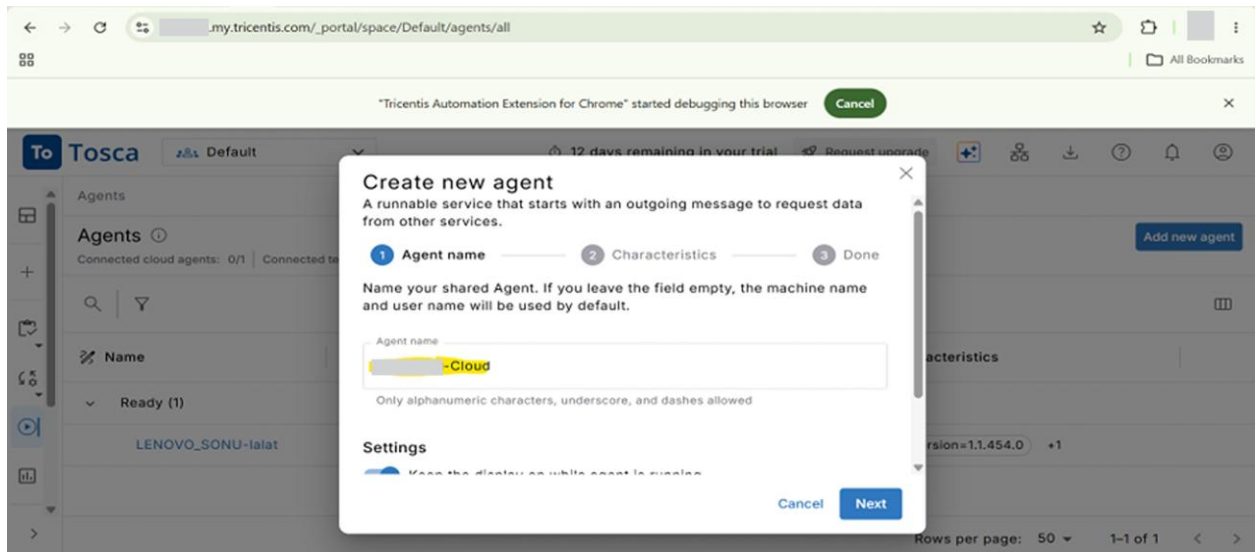

Characteristic	Value
AgentVersion	1.1.454.0
AgentIdentifier	

11. Click on Add new agent

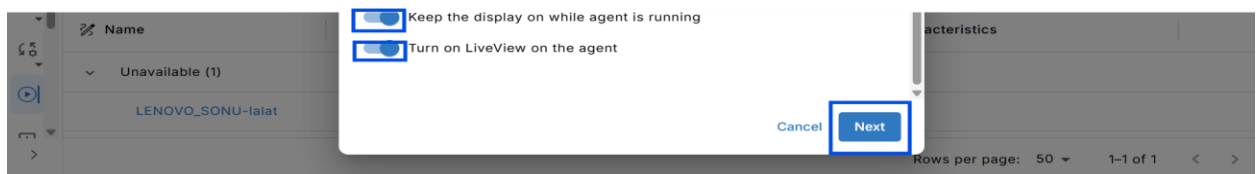

The screenshot shows the 'Agents' page in the Tosca interface. The URL is `my.tricentis.com/_portal/space/Default/agents/all`. The 'Add new agent' button is highlighted with a blue box. The page displays a table of agents with columns: Name, Type, Connection status, Last update (GM), and Characteristics. The first row is expanded, showing a 'Ready (1)' agent. The 'Personal...' link is highlighted with a blue box. The 'Available' status is also highlighted with a green box. The 'Characteristics' column shows 'AgentVersion=1.1.454.0 +1'.

Name	Type	Connection status	Last update (GM)	Characteristics
Ready (1)			2026-09-09 08:21:41	
	Personal...	Available	2026-09-09 08:13:11	AgentVersion=1.1.454.0 +1
Unavailable (1)			2026-09-09 08:21:41	

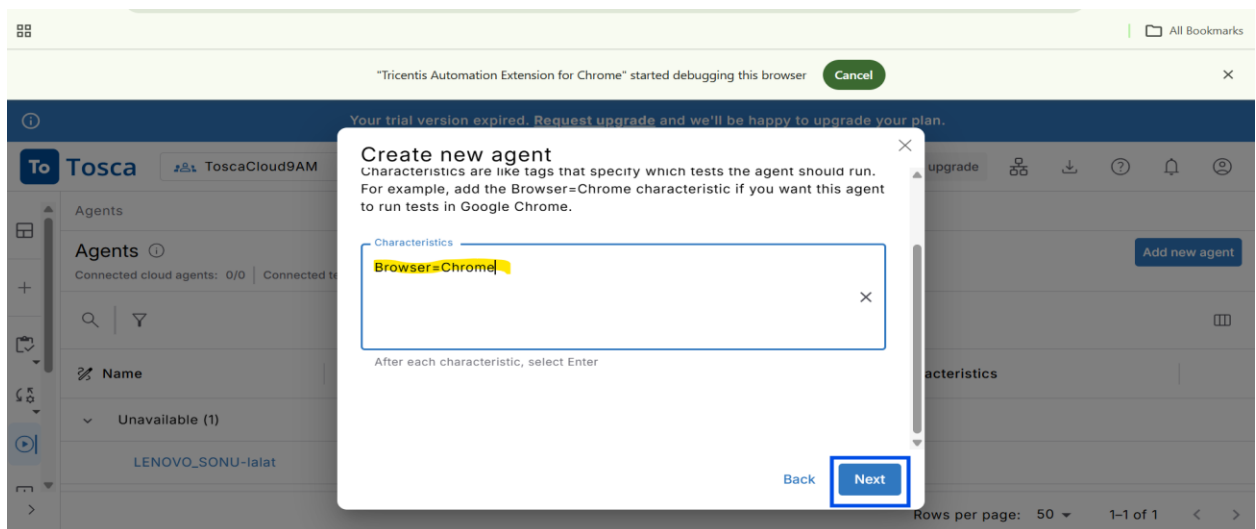

12. Enter the details shown in the screenshots below in Create new agent window. Enter a name for your cloud agent

Move both the toggle buttons in Settings section to On and then click on **Next**

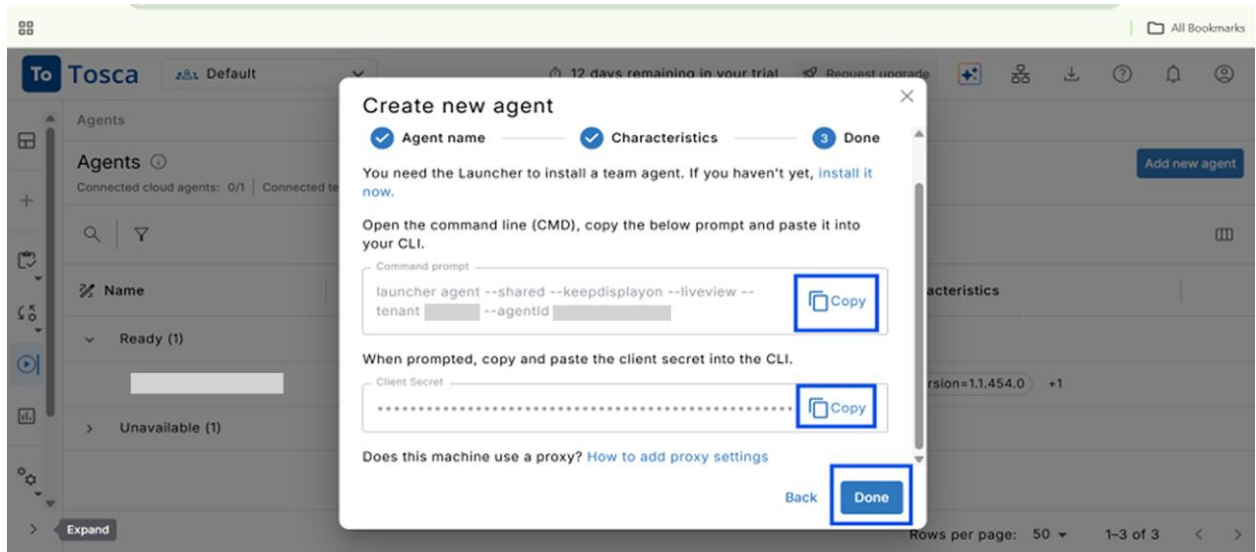

13. Enter specific characteristics for the cloud agent for example – **Browser=Chrome**. It sends message to the cloud agent to run the test cases in chrome browser. After entering characteristics click on **Next**

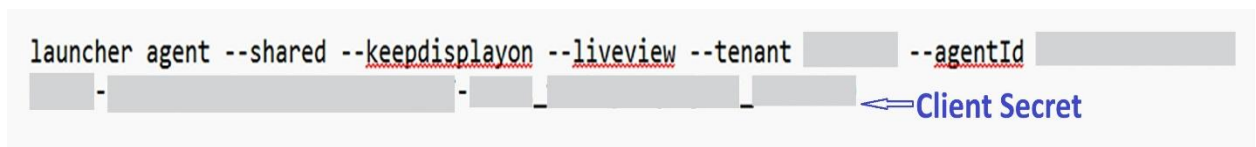

In the subsequent screen a command prompt to launch the cloud agent along with client secret will get generated.

14. In the subsequent screen copy the Command Prompt & Client Secret details into a notepad and click on Done

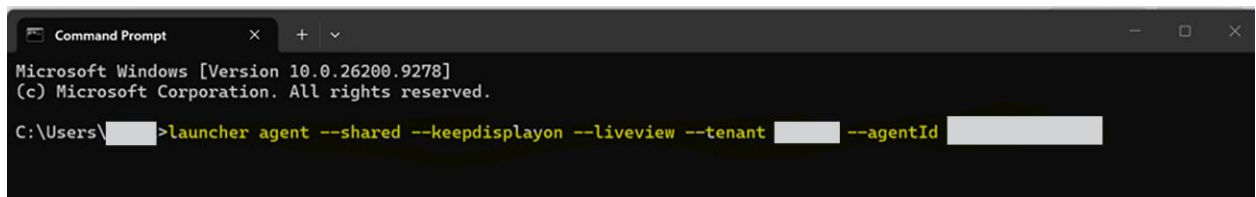

Details copied into notepad to be used later

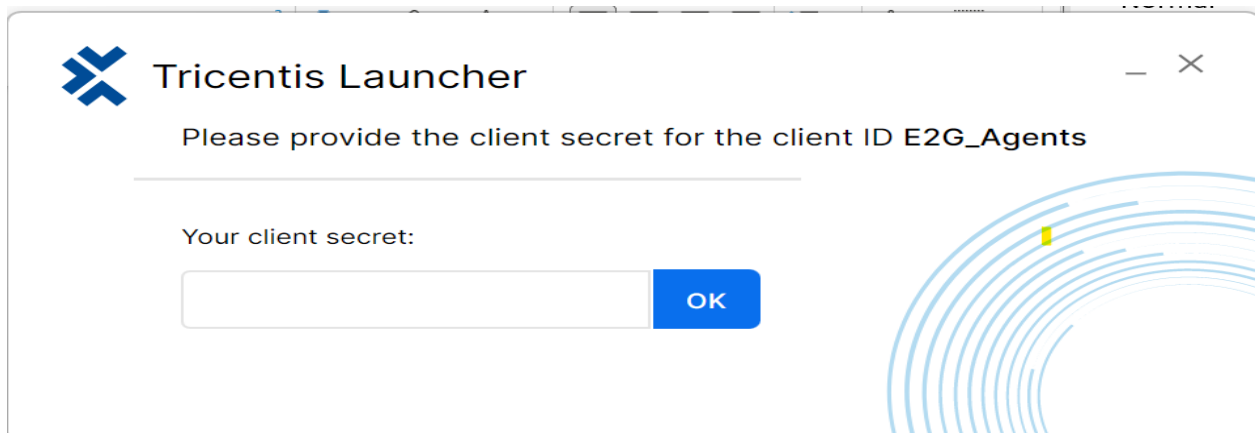

Please Note: A unique client secret will get generated in every new session. You need to copy and use the client secret generated in your system

15. Open Command Prompt and paste the first statement in Command Prompt and press Enter

16. Tricentis Launcher window displays.

17. Copy the client secret from the notepad, enter it in Your client secret: section and press OK

launcher agent --shared --keepdisplayon --liveview --tenant [redacted] --agentId [redacted]
[redacted] - [redacted] - [redacted] - [redacted] ← Client Secret

Tricentis Launcher

Please provide the client secret for the client ID E2G_Agents

Your client secret:

OK

18. Cloud Agent is created and connected

Tricentis team agent

[redacted]-Cloud

Connected

Team agent is shared and test run results are visible to everyone. Don't close it during testing!

Close agent

On checking back in Tosca Cloud, a Tosca Cloud team agent is created

my.tricentis.com/_portal/space/Default/agents/all

The screenshot shows the Tricentis Configuration page for 'Automation Object Service'. The 'Execution Environments' section is active, with 'Distributed Execution' turned 'On'. The 'Distribution Server Address' is 'http://localhost:5007' and the 'Distribution Server Call Timeout (ms)' is '30000'. The 'Elastic Execution Grid' is currently 'Off', indicated by a blue box around the toggle switch. Under 'HTTPS Settings (optional)', the 'Port' is '5006'. A 'Save' button is at the bottom right.

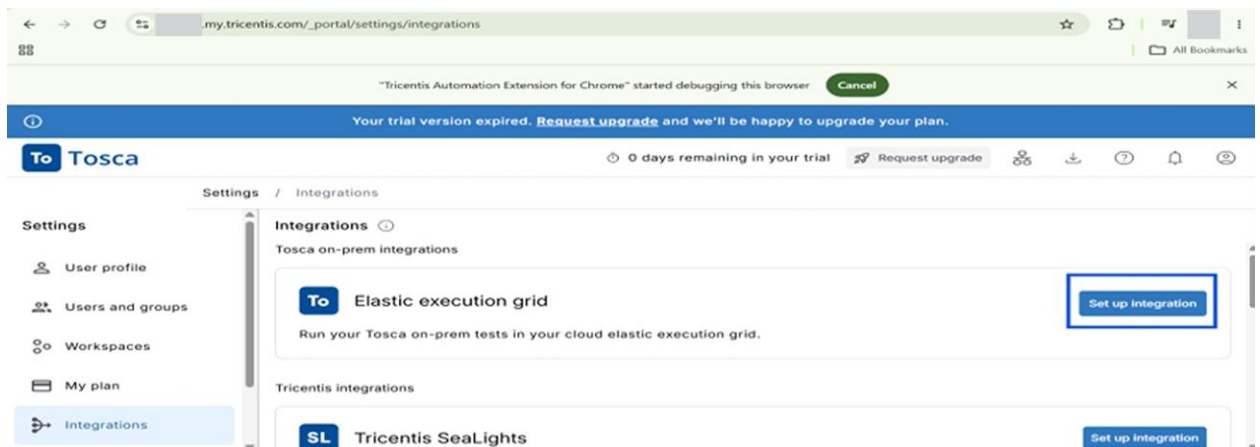

Sections to enter Tosca Cloud Tenant URL, Client ID & Client Secret will be displayed

This screenshot shows the 'Elastic Execution Grid' settings. The toggle switch is now 'On' and is highlighted with a blue box. Below the toggle, text explains that this feature supports running Tosca On-Prem TestCases in the cloud. A list of prerequisites is provided: a registered and activated Tosca Cloud instance, admin permissions for Tosca Cloud, and access to the integrations section of Tosca Cloud settings. The 'Credentials source' is set to 'Local'. The 'Tosca Cloud URL' field contains 'Copy from cloud integration setup' and is highlighted with a red box, with a red error message below it: 'No Tosca Cloud tenant URL or tenant is not reachable'. The 'Client ID' field is empty. A 'Save' button is at the bottom right.

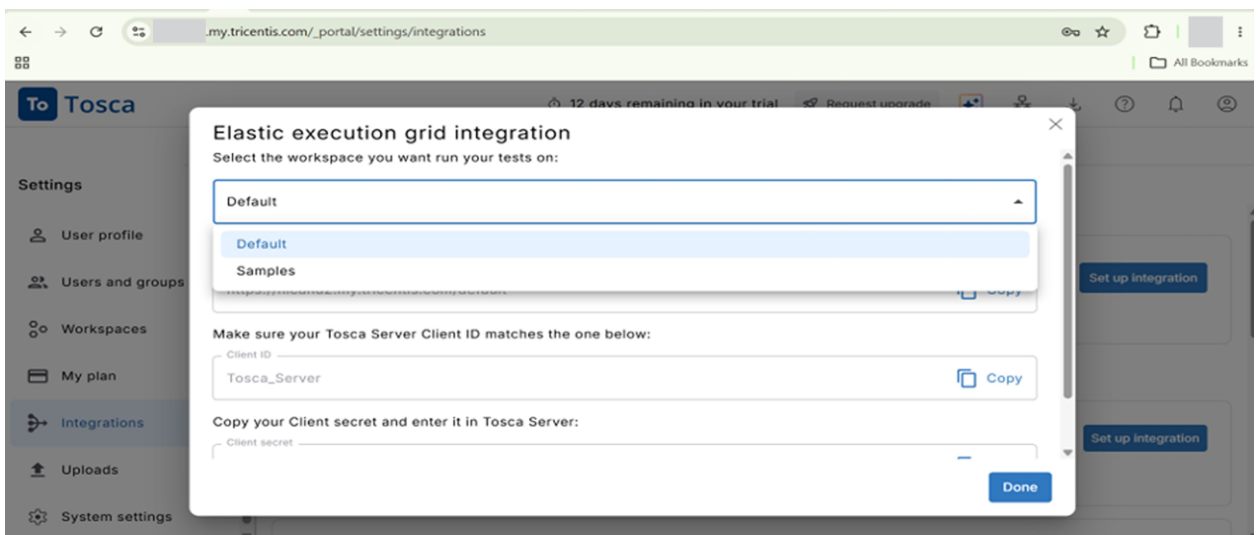

23. Navigate back to Tosca Cloud and click on Integrations

The screenshot shows the Tosca Cloud portal interface. The 'Integrations' tab is selected in the left sidebar and highlighted with a blue box. The main area displays a table of agents. The table has columns for 'Type', 'Connection status', 'Last update (GM)', and 'Characteristics'. There are two rows of data: one for a 'Team agent' that is 'Disconnected' and another for a 'Team agent' that is 'Connected'. A blue box highlights the 'Integrations' tab in the sidebar.

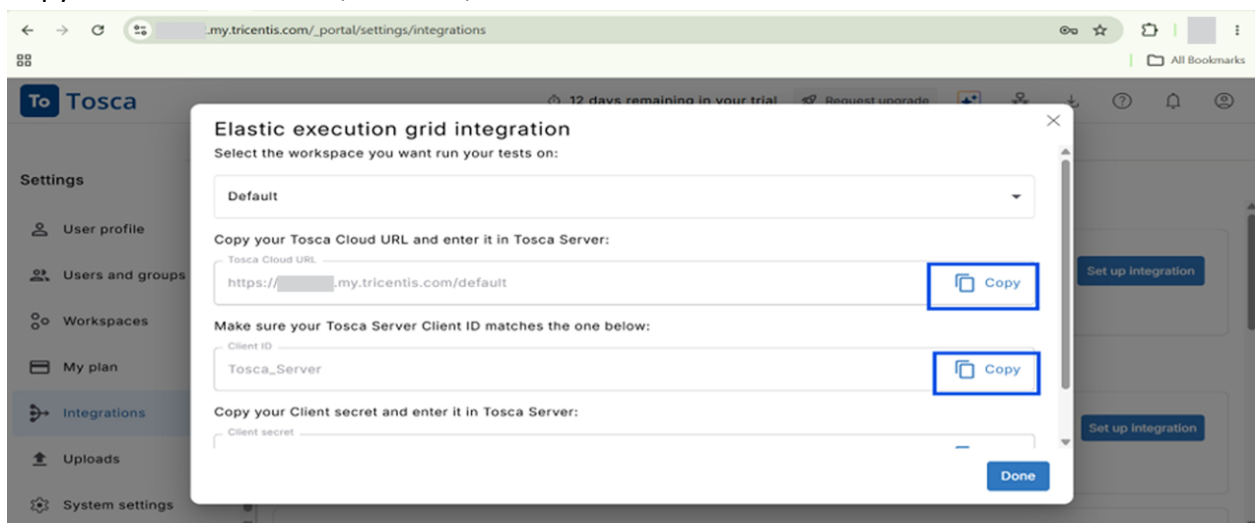

24. Click on Set up Integration button of Elastic execution grid section

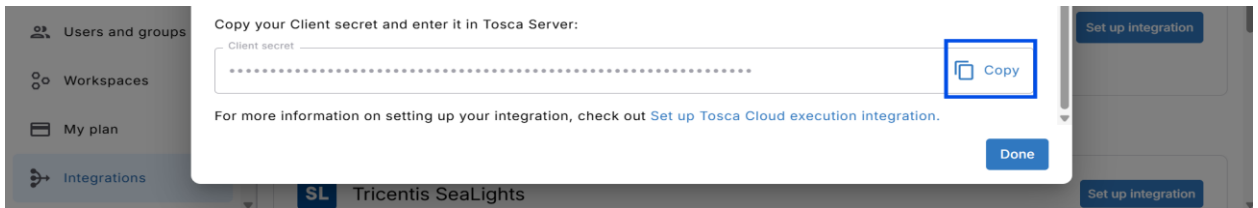

In the subsequent window, select your respective work space

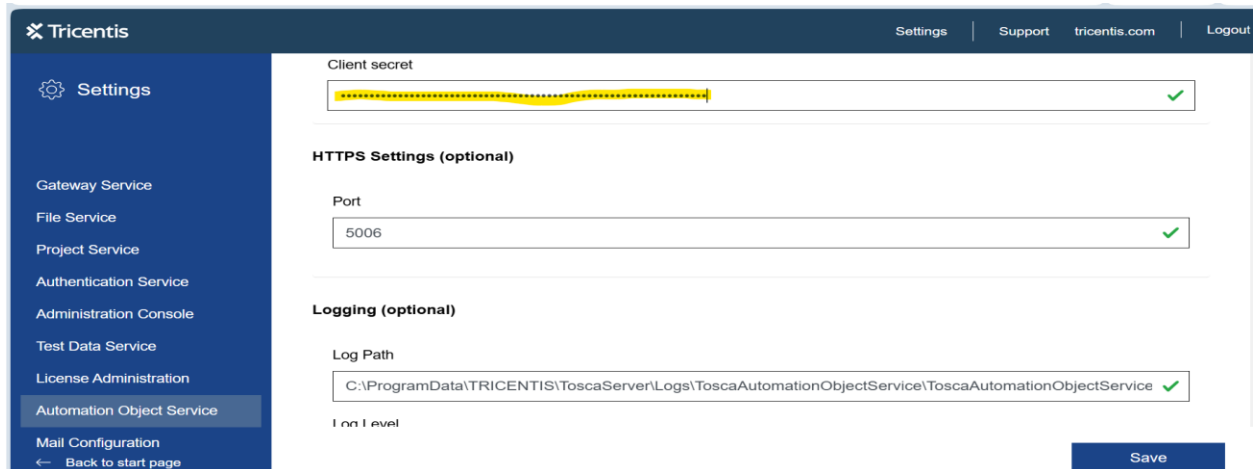

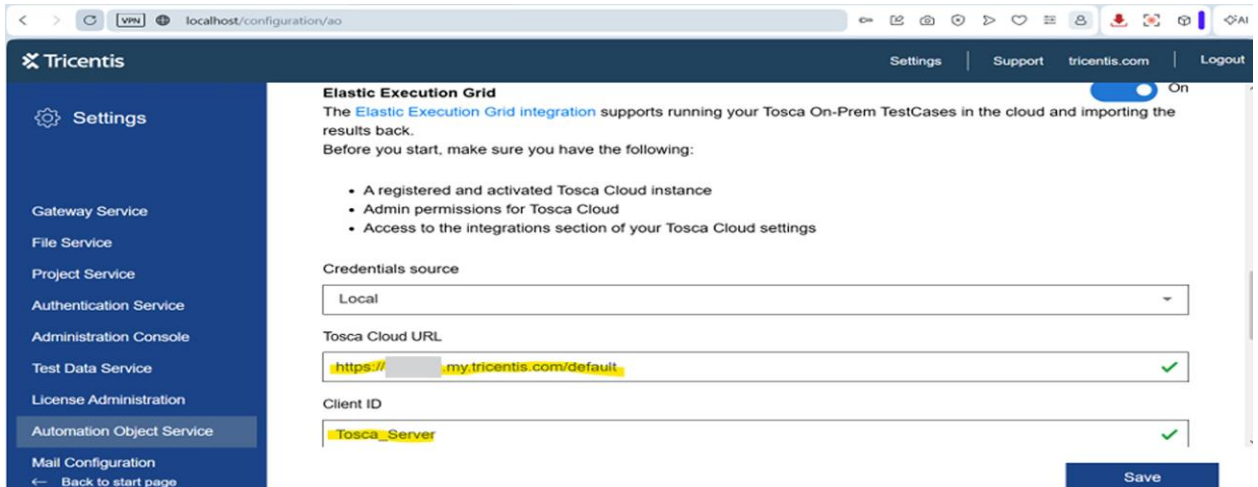

25. Copy the Tosca Cloud URL, Client ID, Client secret

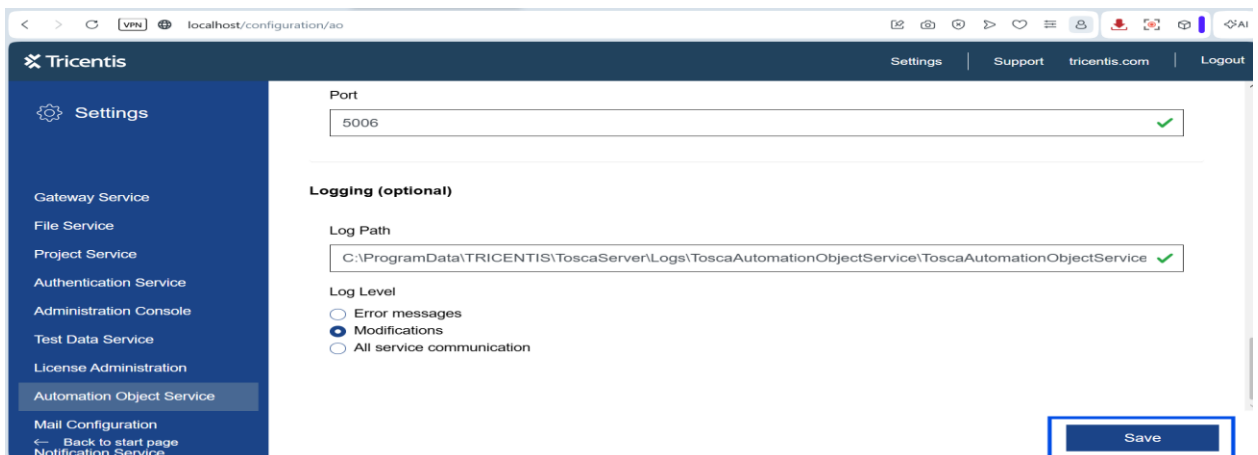

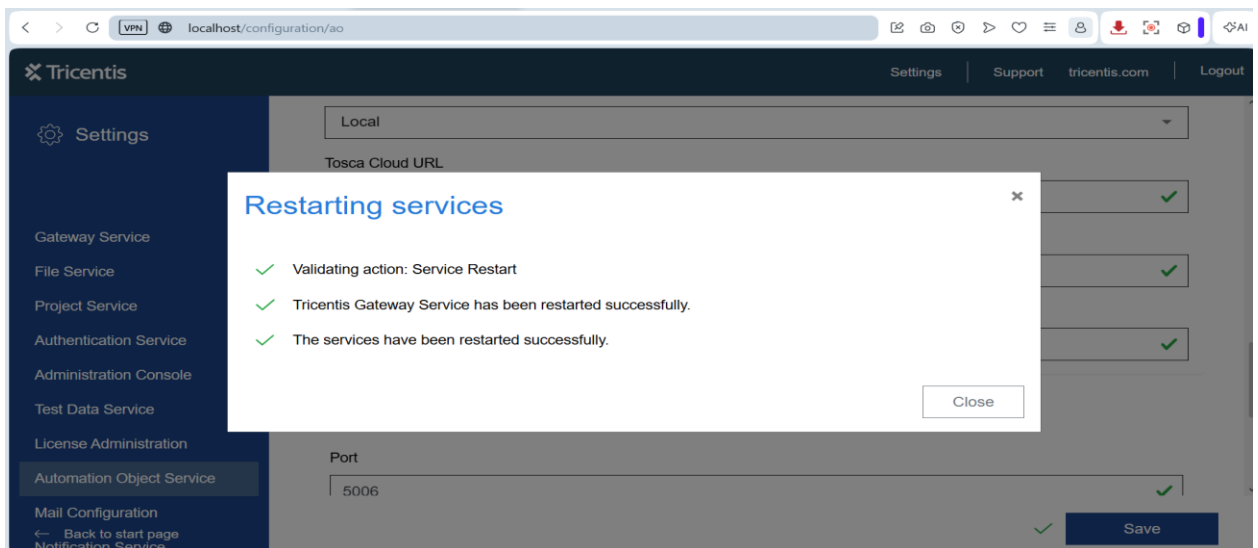

26. Paste them in the corresponding sections in Tosca Server

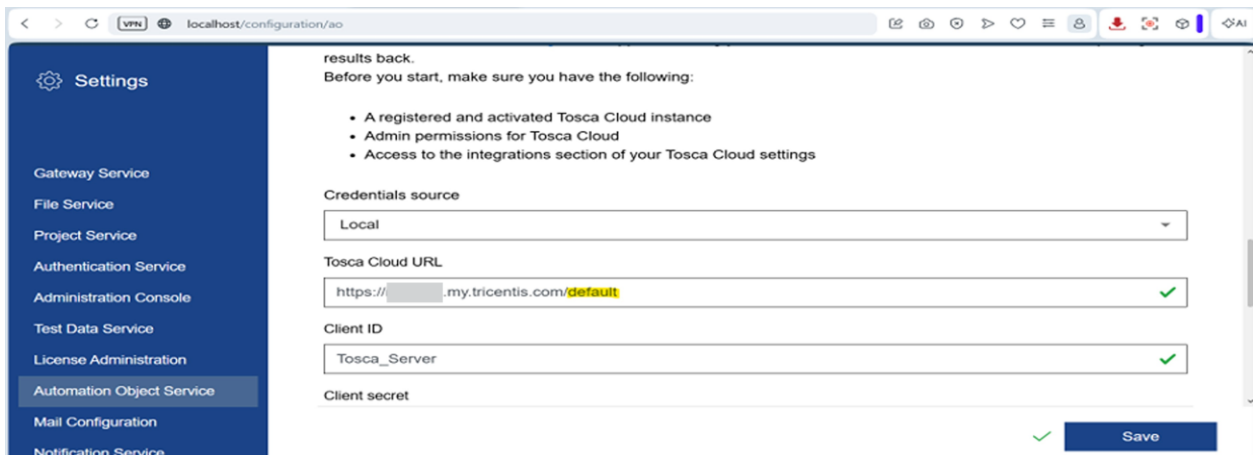

After entering the details, click on Save to update Tosca Server with the new details

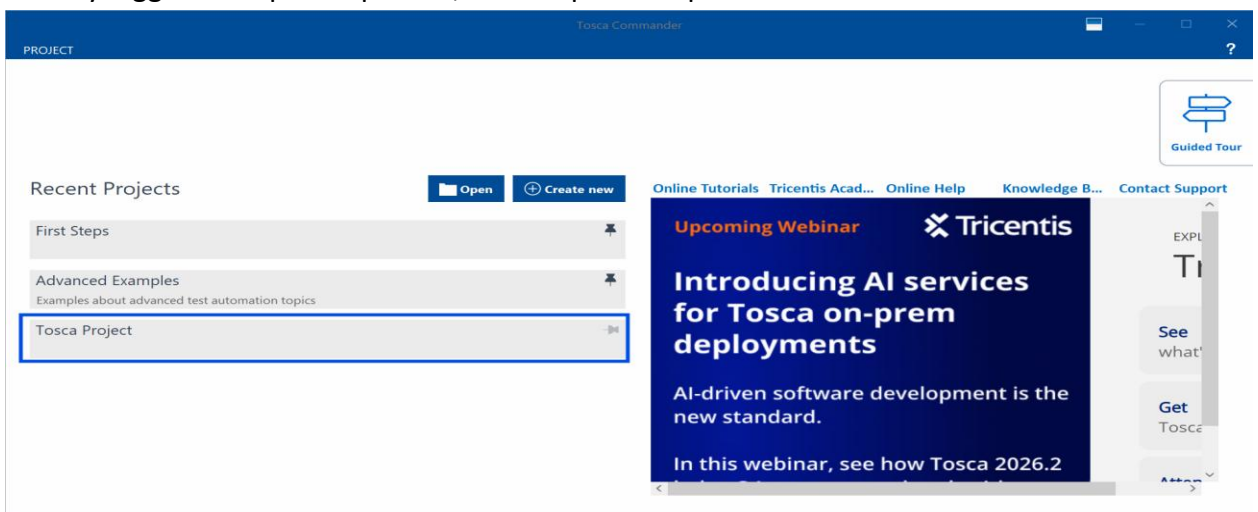

27. On clicking Save, Tricentis Tosca Server services will get restarted

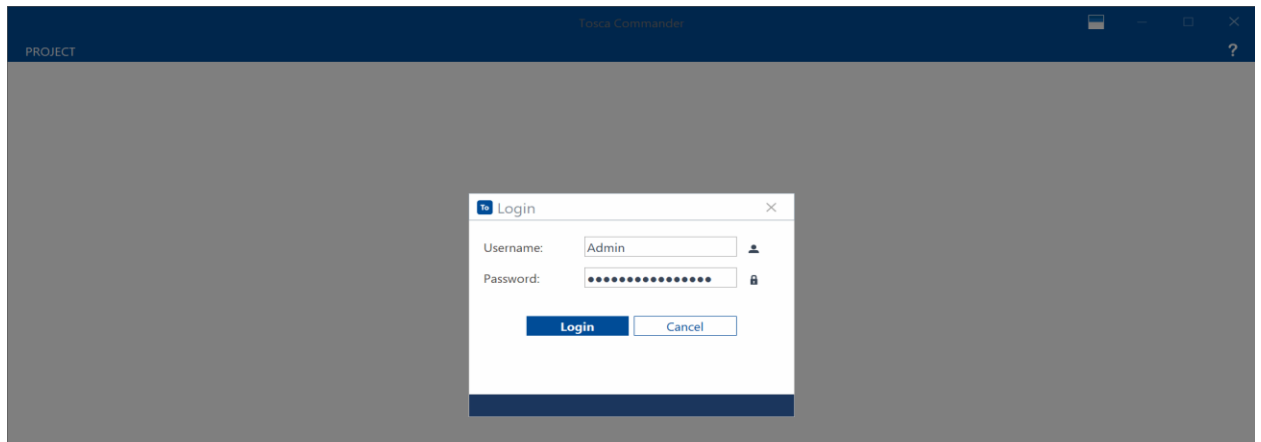

28. Copy the particular workspace id

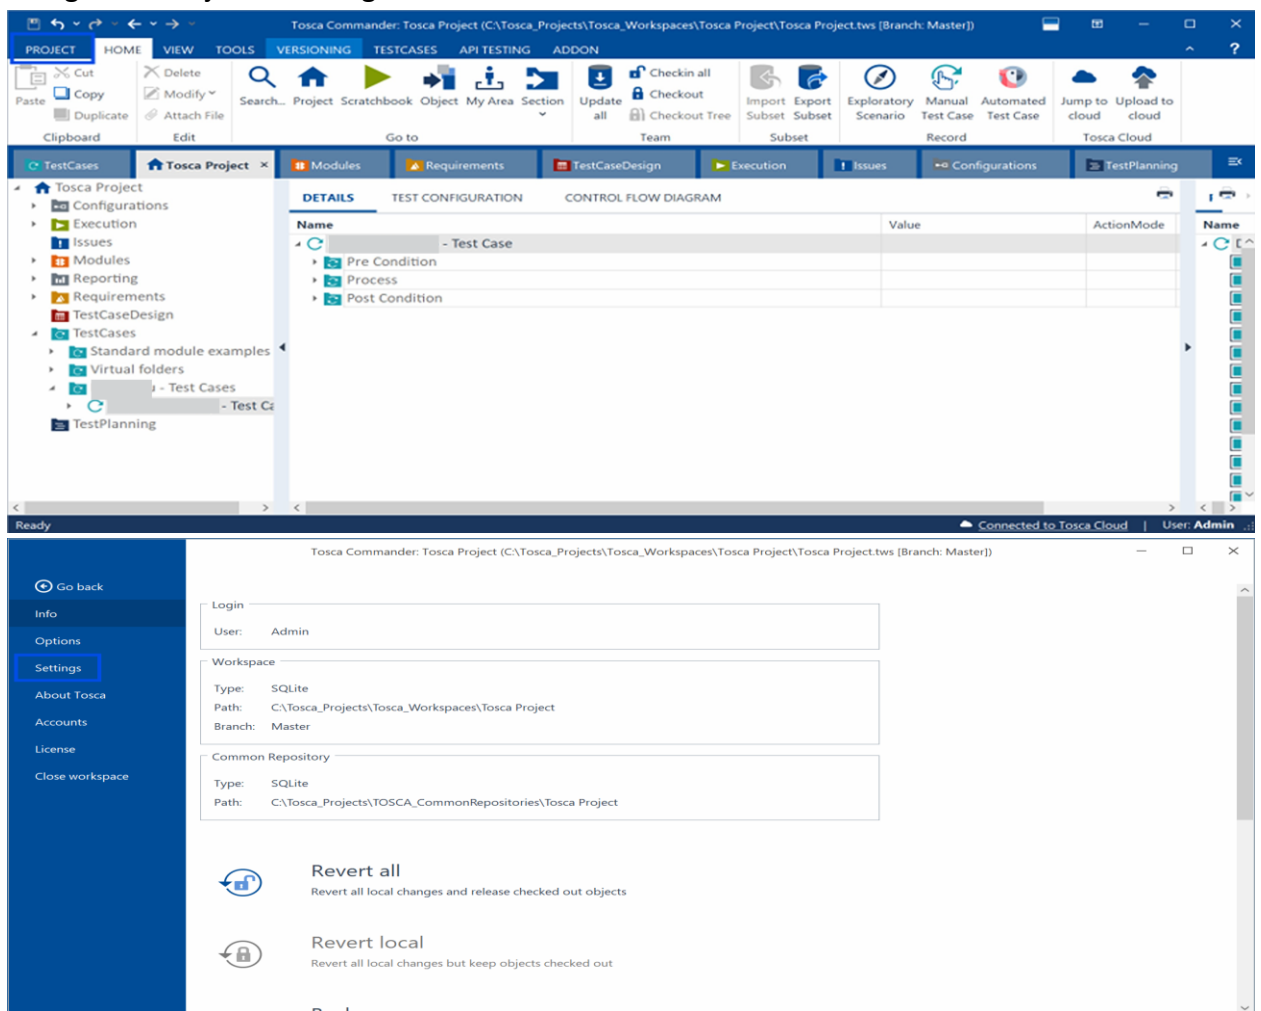

29. Come back to Tosca Commander and log into your particular workspace. If you have already logged in as per Step 1 & 2, then skip this step

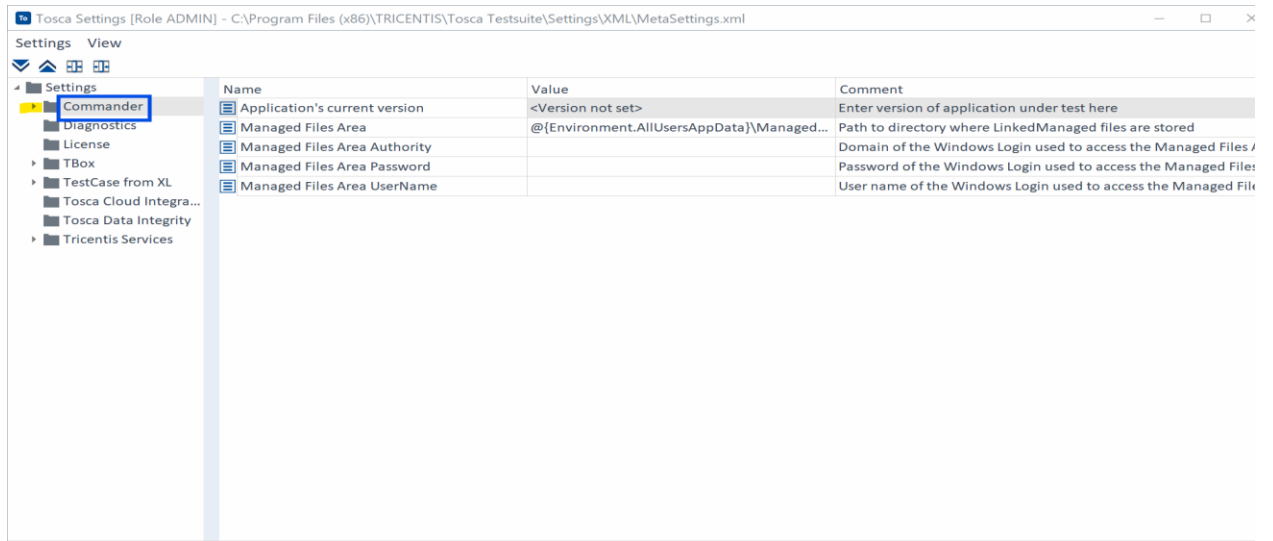

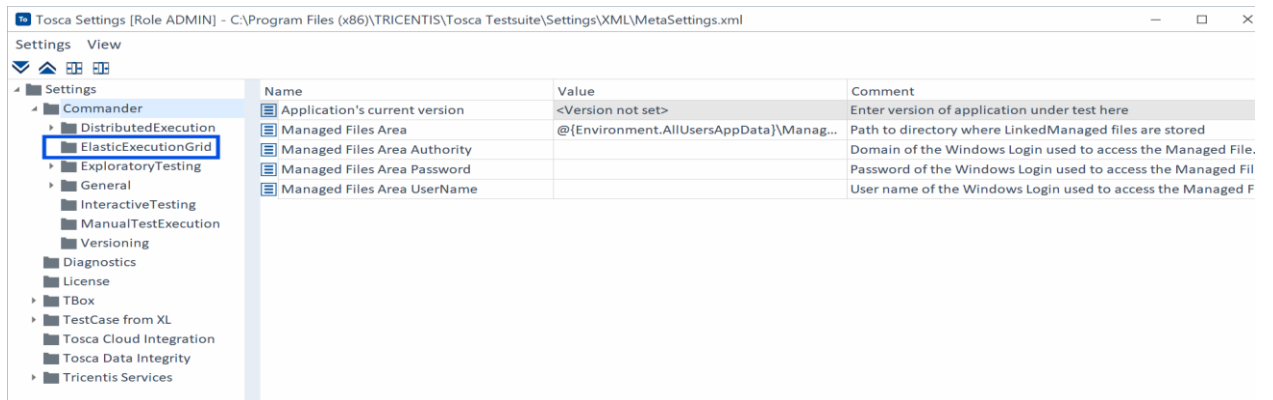

30. Navigate to Project ->Settings section

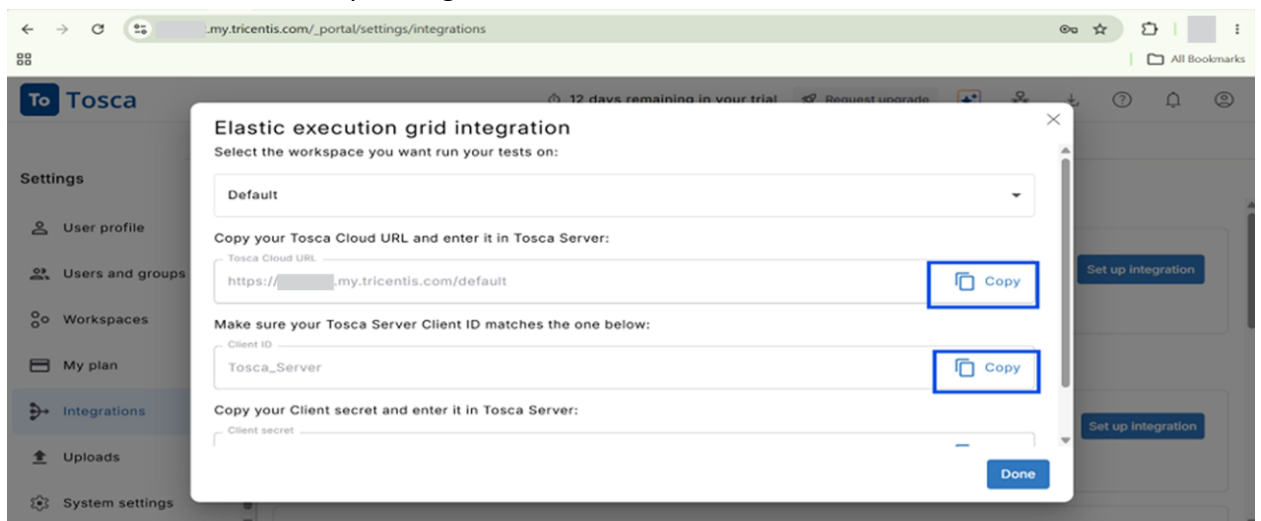

31. Select Commander and then expand the sections under it

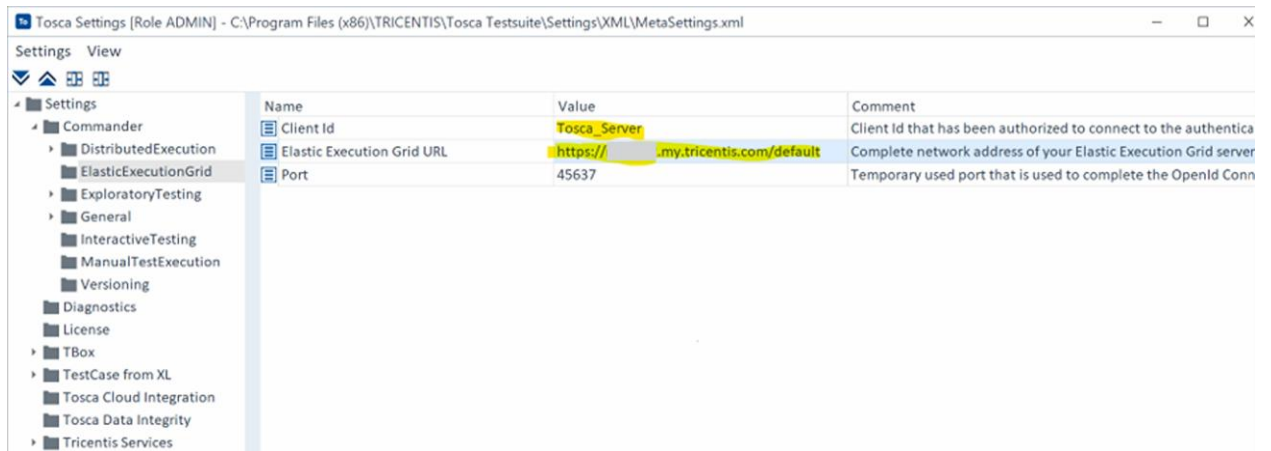

Select ElasticExecutionGrid

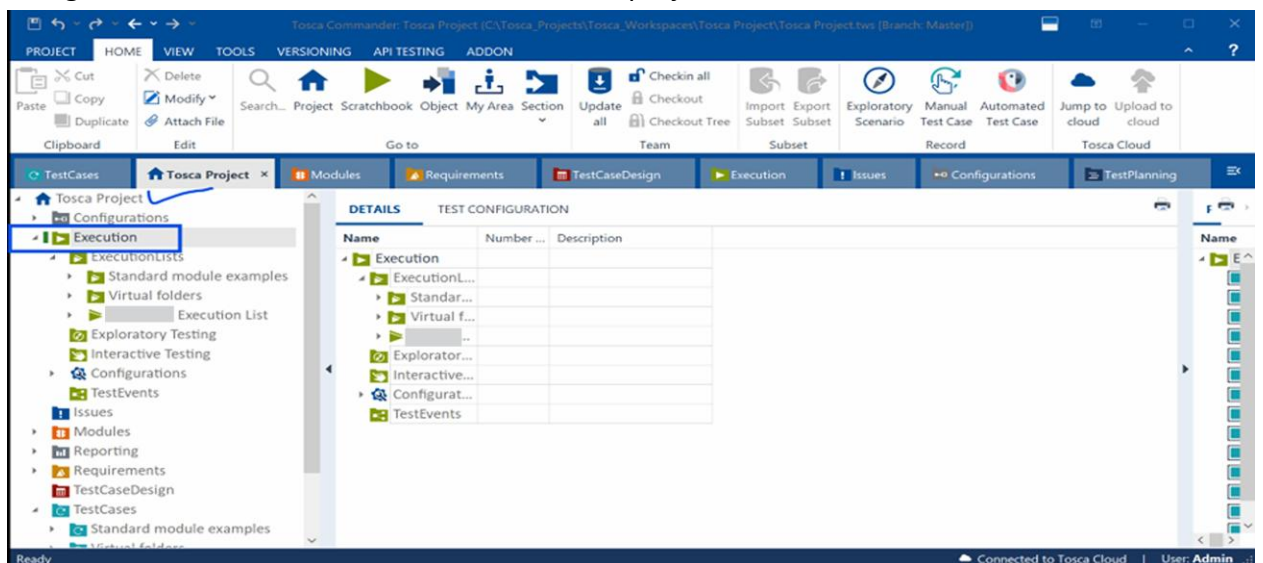

Ensure the Tosca Cloud URL & Client ID which are available in Tosca Cloud the same details are added in corresponding section in Tosca Commander section

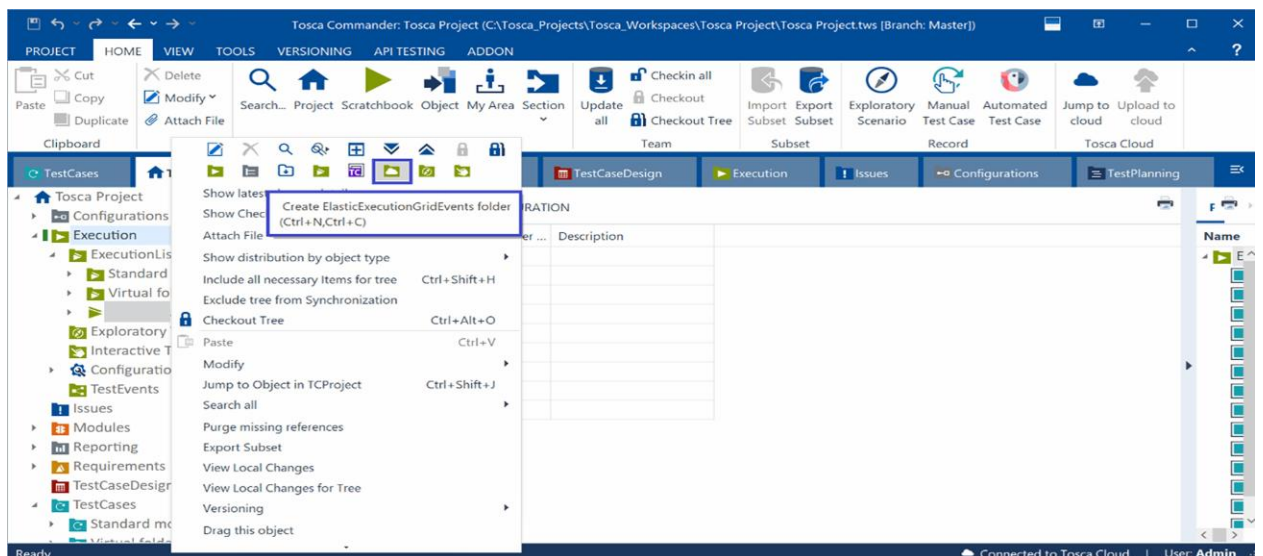

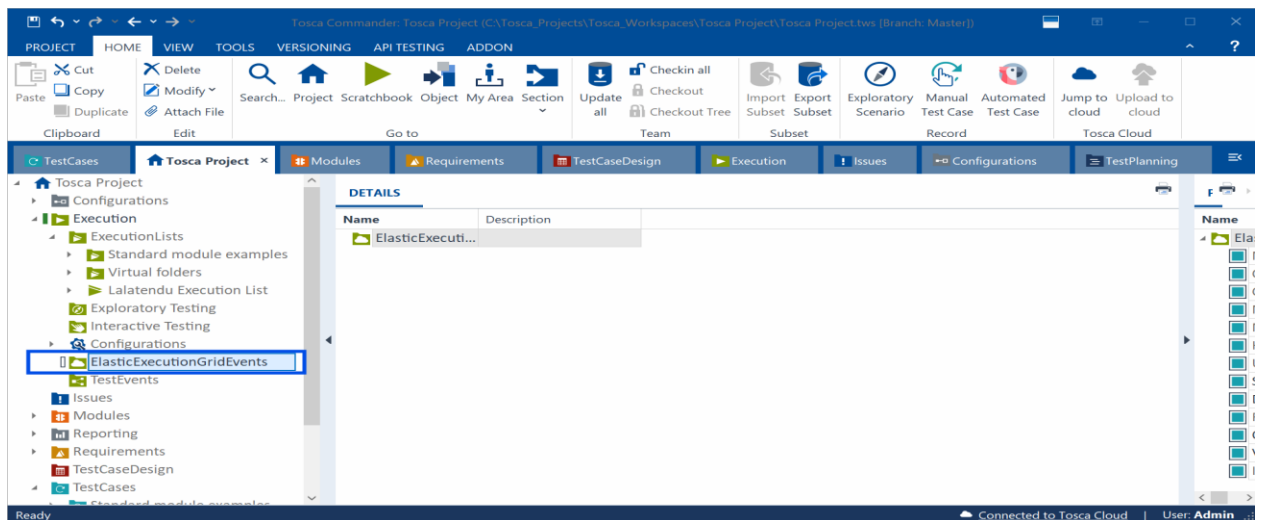

32. Navigate to the root Execution folder under the project root element and check it out

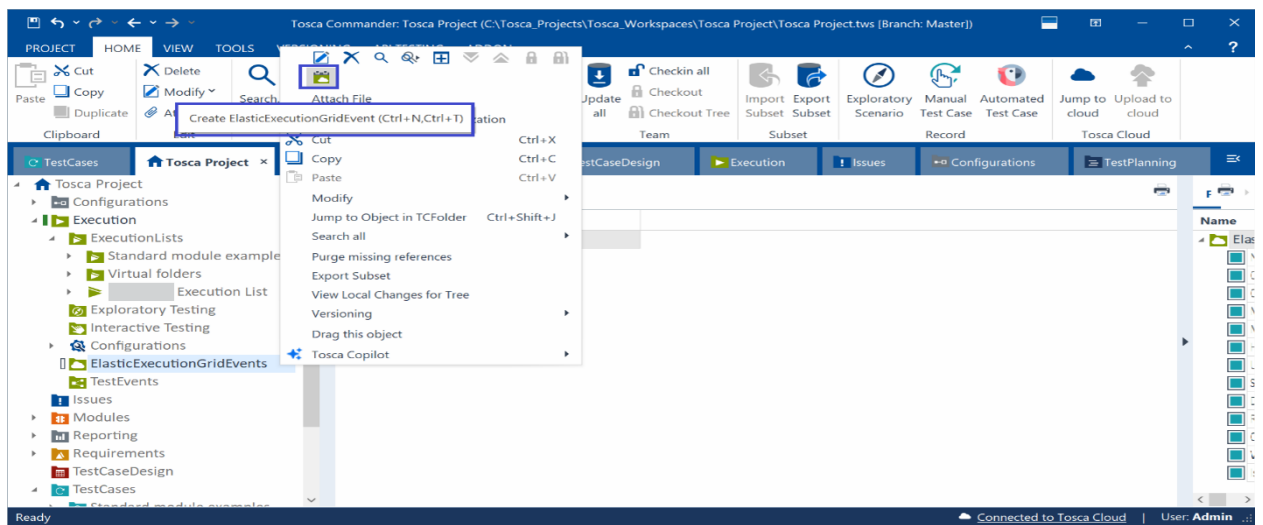

33. Right click on the root Execution folder and select **Create ElasticExecutionGridEvents** folder

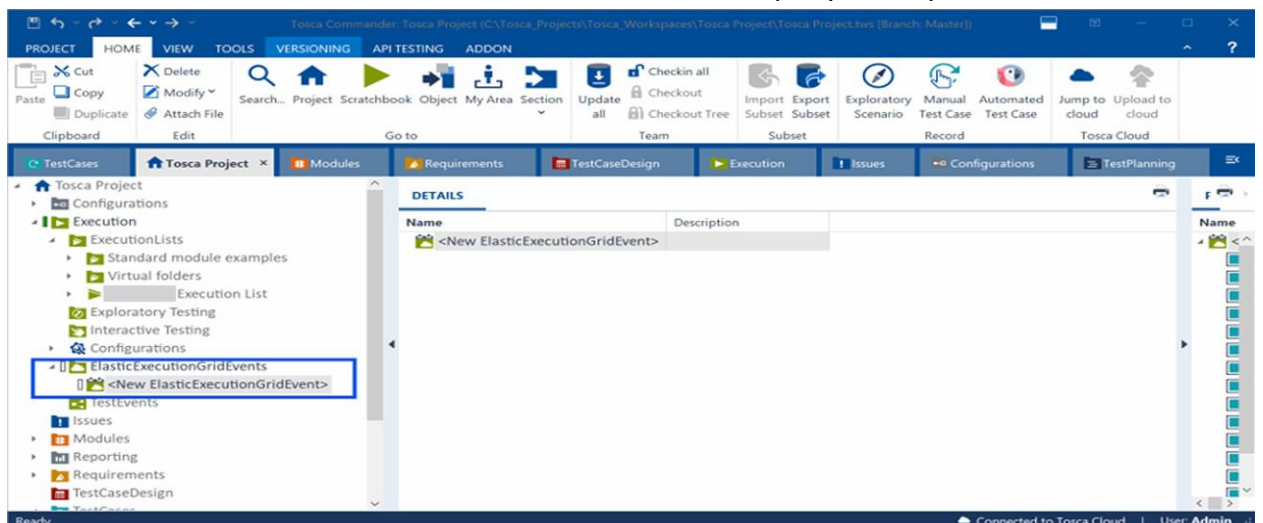

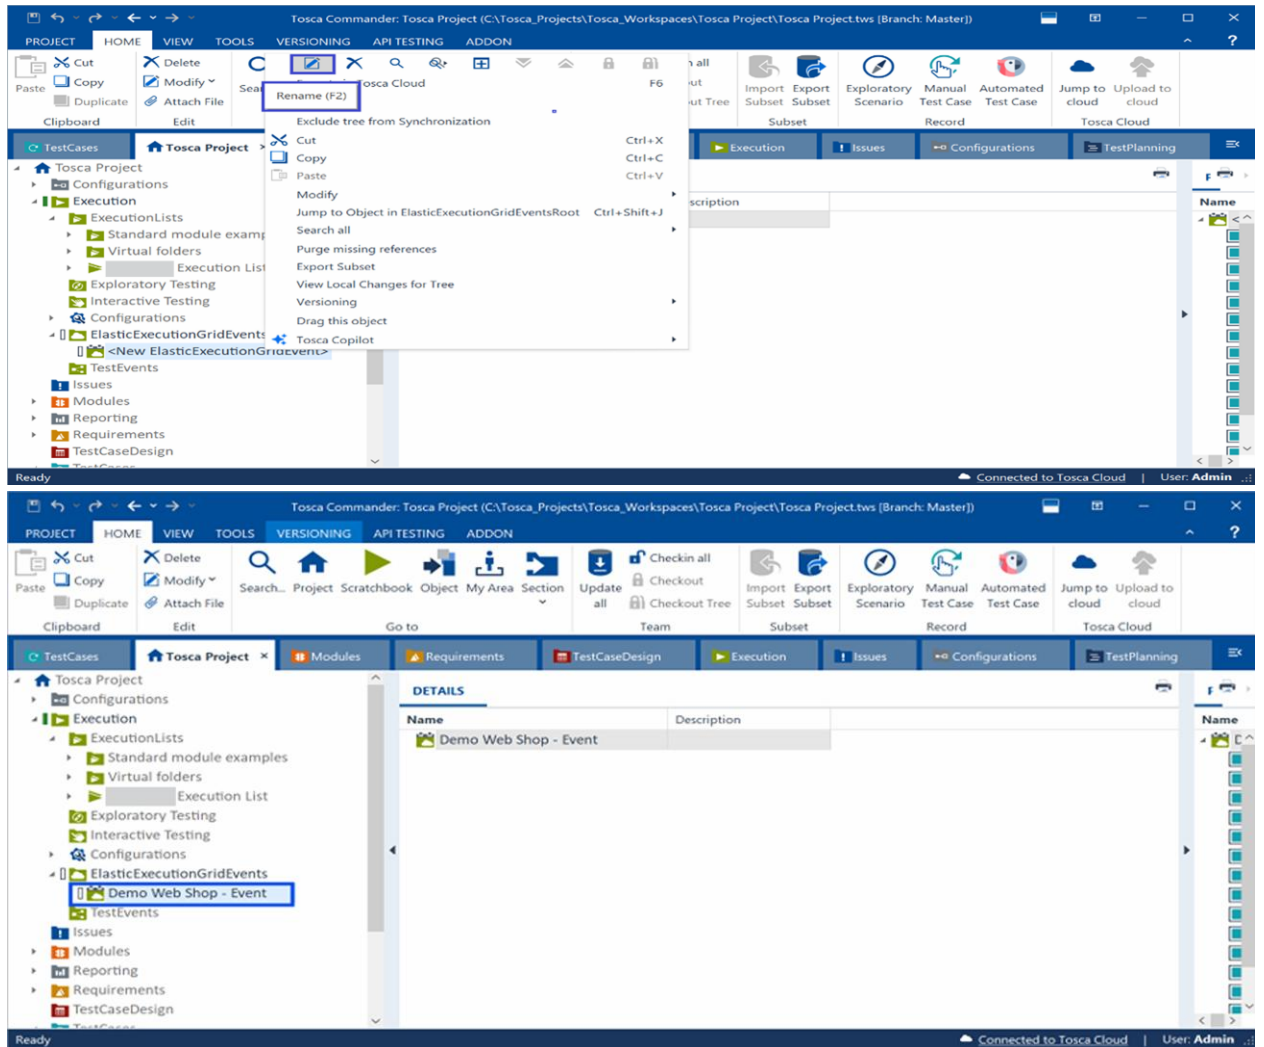

34. Right click on the **ElasticExecutionGridEvents** folder and choose **Create ElasticExecutionGridEvent**

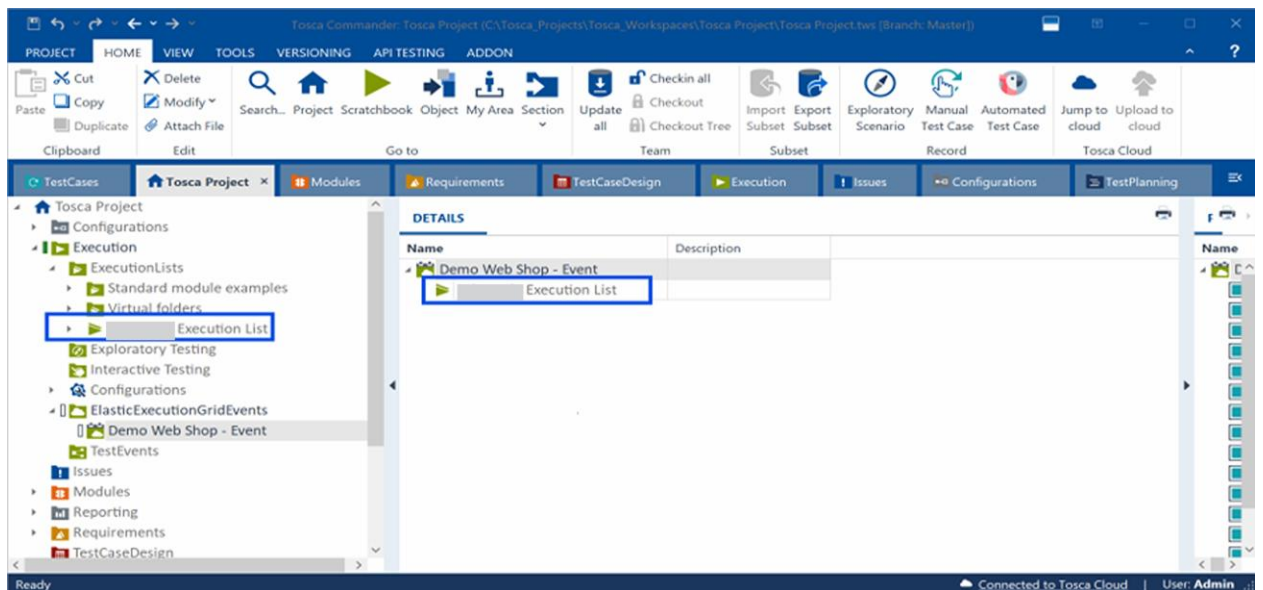

<New ElasticExecutionGridEvent> is created. Rename is as per your requirement

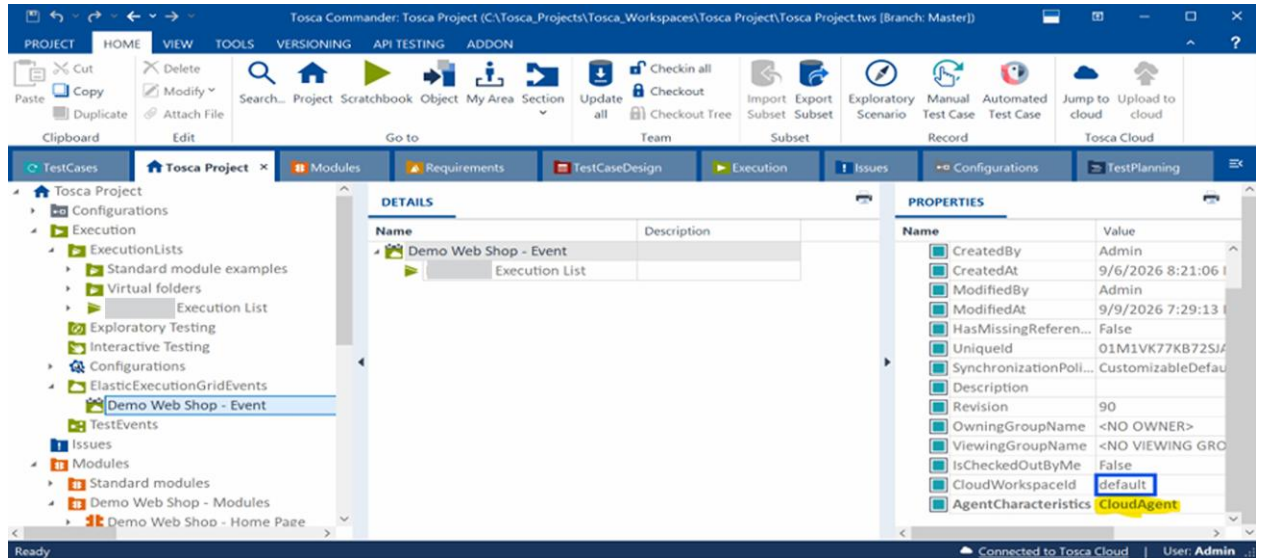

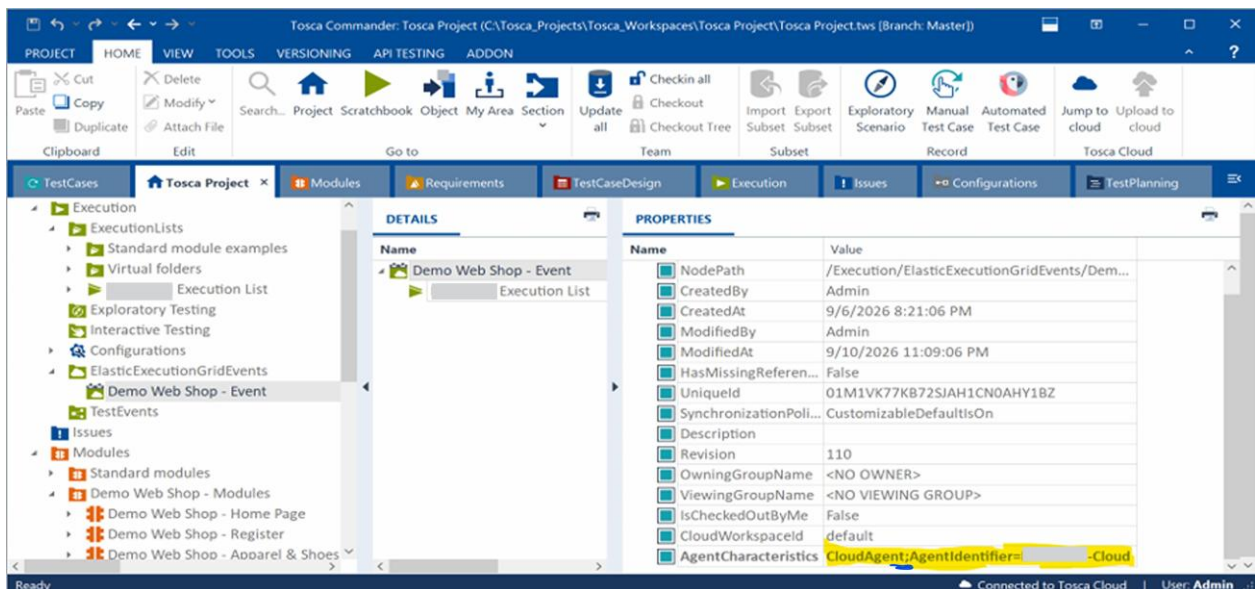

35. Drag and drop your execution list under this ElasticExecutionGridEvent

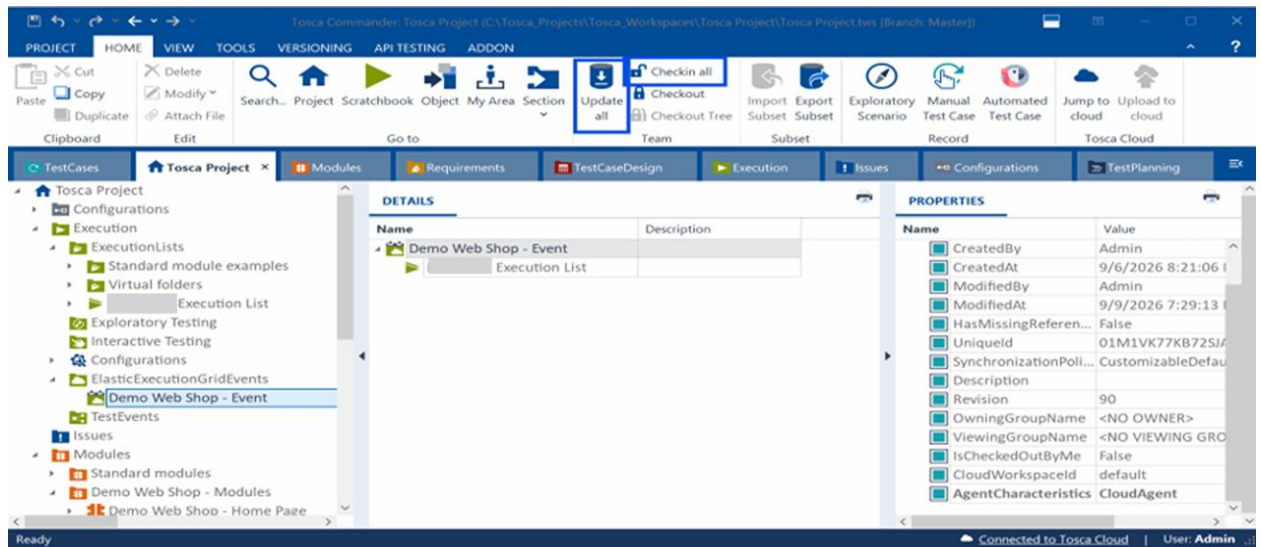

36. Navigate to **ElasticExecutionGridEvent**, check it out and enter the Cloud **WorkspaceId** which you had copied from Tosca Cloud URL & Agent Characteristics as **CloudAgent** or **AgentIdentifier=*****-Cloud** (It's the same **AgentIdentifier** name of the cloud agent which you had created previously)

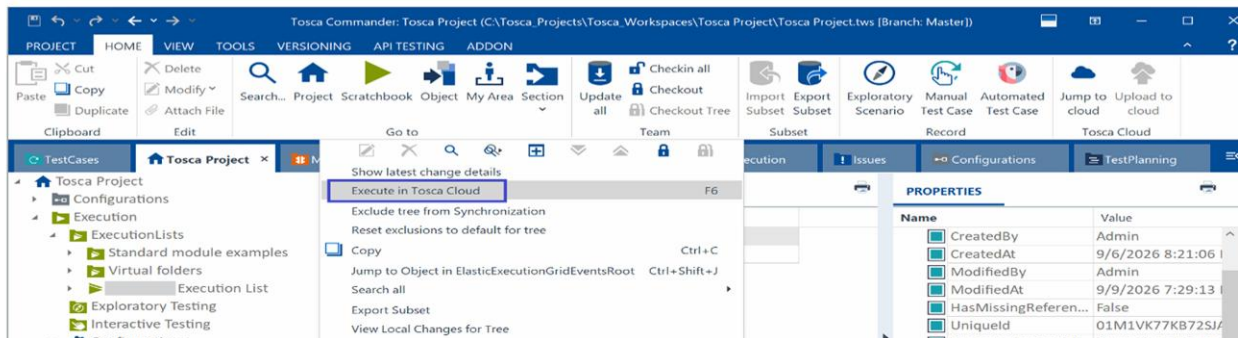

You can club multiple agent characteristics together separated by semicolon ; . Ensure there are no blank spaces or trailing spaces around the semicolon

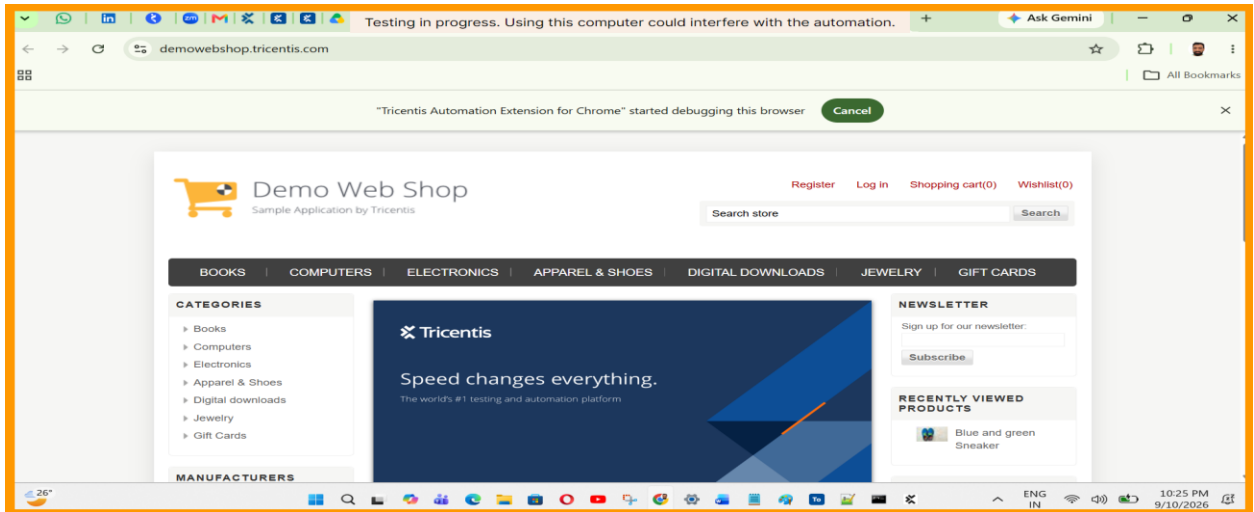

37. Click Check in All, Update All and then right click on **ElasticExecutionGridEvent** and select **Execute in Tosca Cloud**

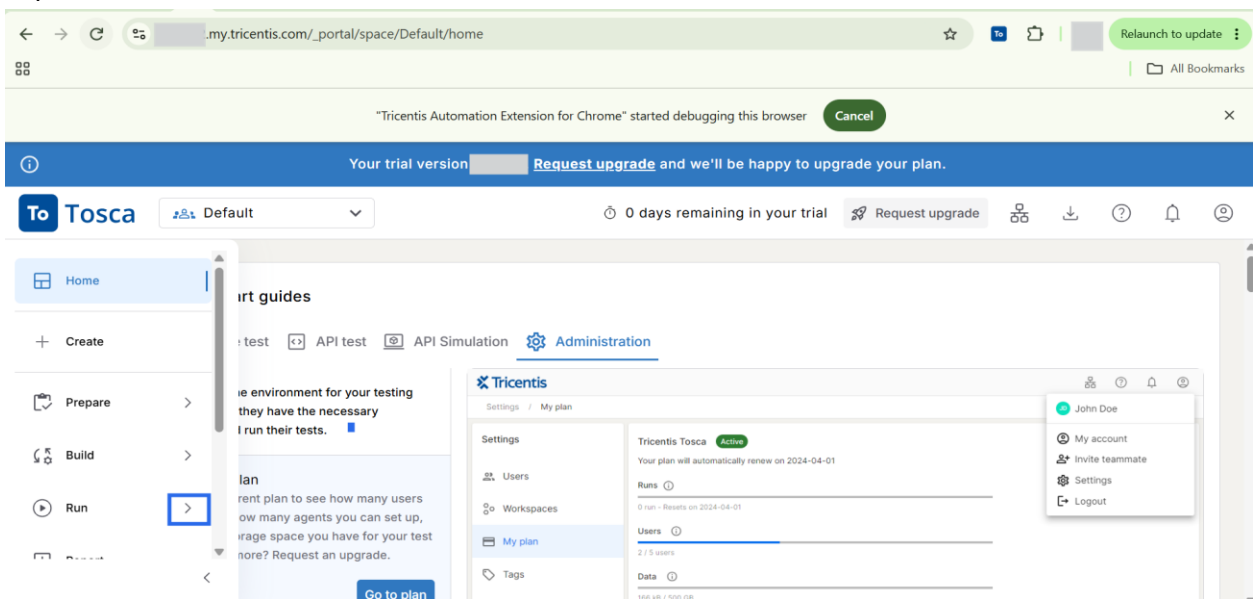

38. Test Execution in Progress

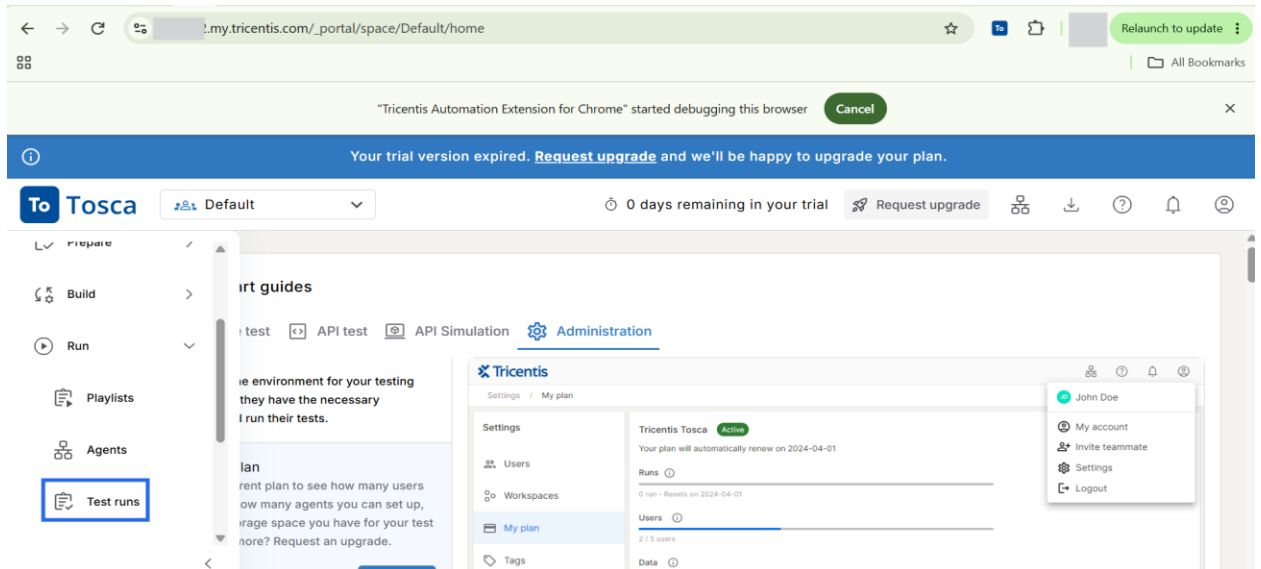

Please Note: Once you click on Execute in Tosca Cloud, the actual execution starts with few seconds' delay.

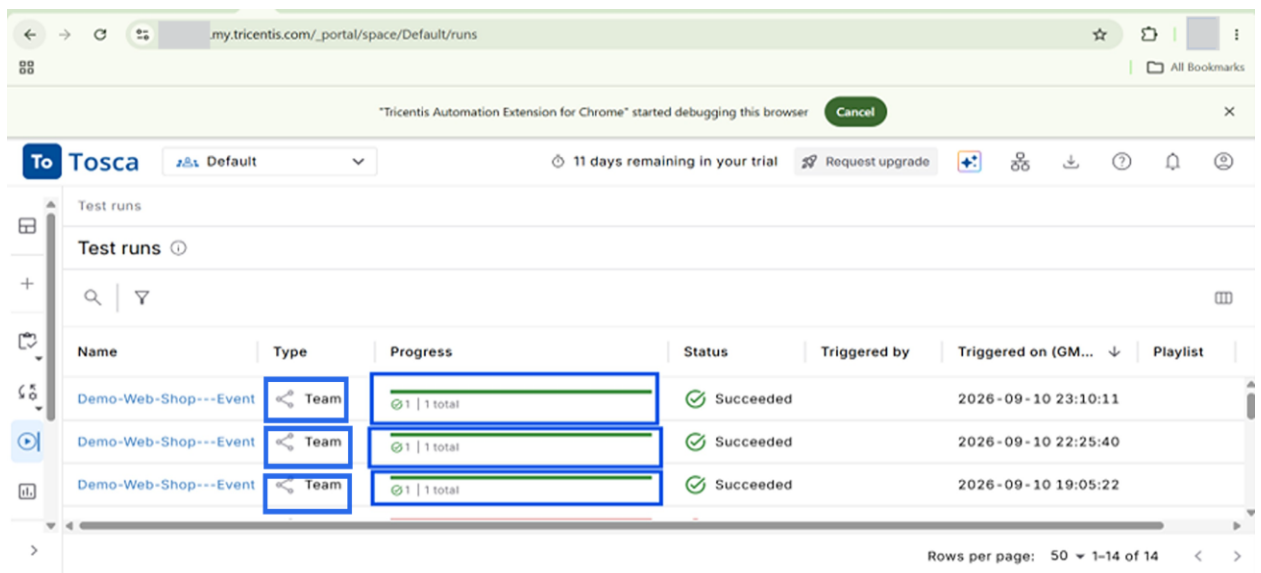

39. Once the execution is completed, navigate to the Tosca Cloud. On the home page Expand the **Run** section

Select **Test Runs** in the expanded window

40. We can view the Test Event run details in the list of Test Runs. Test Event ran in Tosca Cloud through Tricentis Team Agent

41. Click on the Particular Event to view the details
